NARRATIVE HISTORY OF FLIGHT (Please type or print in ink)

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State time and point of departure, intended destination, and services obtained.

On April 24th, 2011, at 1417 local time, I started on a local soaring flight from Pleasant Airport (Turf). I departed on RWY 23L via air-tow and released at 2,500 AGL northwest of the airport. I climbed to 9,000 MSL in two thermals relatively quickly as I proceeded to the northwest. I continued on to "Red Mine" (see file "Flight 4-24-2011 - map). I noticed very little sink between "Hells Canyon" and "Red Mine". I proceeded northeast since that's where most of the marker clouds were. North of "Hells Canyon" I encountered some short-lived but severe turbulence. At this point I turned to a heading back to Turf. A few minutes later, abeam the northwest end of Lake Pleasant, I encountered the same turbulence and from that point on encountered strong sink - continuously 500 fpm to 800 fpm with extremes up to 1,200 fpm to 1,500 fpm. I tried to make turns to the left and right and increased my IAS to minimize time in sink. I realized I would be unable to make it back to Turf and looked for a suitable landing spot. Roads and parking lots were too busy on a Sunday afternoon to land on. On the southwest end of the lake I made the decision to land along the shoreline - which I did. I touched down approximately 30 yards from shore where I was picked up by a pontoon boat and two Sheriff boats. NTSB was contacted and all relevant information given.

RECOMMENDATION (How could this accident/incident have been prevented?)**Operator/Owner Safety Recommendation**

Even though I came as prepared as I possibly could, I could have used even more - perhaps localized - information. I have done the following to prepare myself for this flight:

- two familiarization rides on 3/10/2011 with Instructor Dan Weber at Lake Pleasant Airport
- weather and thermal planning via XCSkies (www.xcskies.com)
- print-outs of multiple local maps of the area (see attachment "local maps.jpg")
- performance calculations with glide ratio of 15:1; the glider has a glide ratio of 33:1 - so I used less than 50 percent of the glider's performance ("performance map.jpg")
- I talked to instructor Chris Anio about outlanding locations with the maps I had at hand (see black underlined areas on the map)
- I discussed my performance calculations with instructor Carl Baxter (see concentric circles on map)

In retrospect I understand I got caught on the lee-side of a ridge or the downdraft of a wave. While I have experienced wave plenty of times before over the Rocky Mountains, it has not occurred to me that relatively severe wave can also happen over the "hills" northwest of Phoenix.
