NARRATIVE HISTORY OF FLIGHT (Please type or print in ink)

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State time and point of departure, intended destination, and services obtained.

Following uneventful flight from KPVF to KPRB, Departed 4:25 PST from Paso Robles KPRB GPS direct to KPVF. Obtained VFR flight following shortly after takeoff. Flight following cancelled by ATC approximately 15 nm from KPVF at approximately 5:35 PST. Squawked 1200 on xpndr and radioed my position on 122.8 CTAF KPVF. Checked weather AWOS 128.125. Winds calm. Selected Rwy 23, activated the airport light, turned both landing lights on, gear down, 50% flaps. Immediately following touchdown a deer became visible on the runway. Applied both brakes full after determining no time/distance from deer to apply power for go-around. After striking deer, airplane veered left off of runway and down a hill since both brakes were applied instinctively and right brake was non-functional.

RECOMMENDATION (How could this accident/incident have been prevented?)**Operator/Owner Safety Recommendation**

The A/FD for the airport does include "DEER ON AND INVOF RY ESPECIALLY NGTS." However, the AWOS recording makes no mention of the potential presence of deer. I would recommend this text be added to the AWOS broadcast, especially following sunset.

The airport recently received grant funding for replacing the perimeter fence around the entire airport, including replacing two vehicular gates. During the early summer of 2013, the construction of the perimeter fence was complete, but there were problems with the operation of the two vehicular access point gates. In response, airport personnel would leave the two gates open during the day and close them at night. This practice continues as of the date of this report.

In addition, the gates are only 4 feet high which will not prevent deer from entering even when closed at night.

Delay in completing the project and leaving a small portion open of an otherwise fenced environment has resulted in more deer "trapped" in the airport and a more hazardous environment for pilots. The project needs to be completed as soon as possible and needs at least six-foot high gates.
