NARRATIVE HISTORY OF FLIGHT (Please type or print in ink)

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State time and point of departure, intended destination, and services obtained.

After fueling up I departed KOAR at 12:00PM pst. The weather was clear and we were VFR direct to destination of KHIO until the last 20 minutes of the flight. At this time I picked up a clearance from Portland approach since the weather was forecast to be about 200 and 1/2. I asked for the ILS 13 and was given vectors. The new atis advertised an indefinite ceiling and very poor rvr. The controller advised me that another aircraft had gone missed. I elected to try the approach anyway since I could see from my altitude of 5000' that there were areas where the fog was dissipating. Vectors were started and I was handed off to HIO tower on final- still in VFR conditions. I was cleared to land over Couve and did not break into the top of fog until about 1000 feet. The fog was very thick and the light was fading. I didn't see the runway until I was already past the 1000' marker and by that time I had drifted to the right. In attempting to correct I landed hard in the mud right before A3 intersection. The momentum carried us up onto the pavement but the L main and nose wheel and struts sheared off and the prop struck the runway and we came to a stop. I shut down and we all evacuated safely. The tower hadn't seen the accident so I called. Responders arrived within 5-8 min.

RECOMMENDATION (How could this accident/incident have been prevented?)**Operator/Owner Safety Recommendation**

FAA could have not cleared me to land but more importantly I should have missed the approach at the MDA.
