NARRATIVE HISTORY OF FLIGHT (Please type or print in ink)

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

On a final glide into Truckee, checked AWOs which reported 220 @ 7 gusting to 16 knots. Was on O₂ with Mountain High system. I planned to not go more than 400 feet north of 20 due to gusting winds 20° from runway heading. Don Morgan of FAA told me that at time of crash, wind had shifted to 260° and very gusty. At about 100 feet north of runway, hit very strong sinking air that also banked me to my left. I held hard rt. rudder and stick wt. to counter the bank. The glider started to respond rt. suggesting I was not stalled. Just before hitting bank 4 feet below runway, I popped the stick back to reduce collision angle. Struck bank nose first, then wing. Don't remember until stopped facing backwards next to runway.

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

Perhaps either turning base before end of runway or possibly being very high on final going through sinking air at end of runway

It was a wonderful day of soaring. If I hadn't told some friends that I would meet them for dinner that evening I would have made it to the Columbia river before turning back to Truckee. My average speed for the 890 Kms out and return was nearly 100 mph. I did my normal changing oxygen down to the 5000 foot cutoff so as to stay on it for my final glide. I know fatigue wasn't a factor as I had only flown for less than 30 minutes during the previous week. Over the previous month I had flown 2 national contests, so I think you could say I was adequately current with my flying. As I came in I checked the local AWOS to get winds at Truckee. Winds were reported as 220 at 7 gusting to 16 which was a little high but close enough to runway 20 to land there. (I found out later from the FAA inspector that winds had shifted just as I was on final to 260 and very gusty, but I didn't know that at the time). I did a close in base to final to try to avoid getting too far downwind where I and others have previously found sink. I turned final 400 feet north of the runway end 200 feet above the runway. Suddenly the bottom dropped out and I was getting turned to the left. I gave it hard right rudder and right stick. The glider was just starting to turn right from my inputs, so I know it wasn't stalled. About 20 to 30 feet from the runway I was perhaps 8 feet below the runway surface and could see my likely collision point. I popped the stick back just before making contact to reduce the angle a bit. My nose hit first, then the next thing I remember I was facing backwards next to the runway with the front of the fuselage missing. My feet were hanging out in open air and the cockpit was cradling me fairly tightly, I think protecting me from further injury. I had a hard time breathing and my legs were tingling, but I seemed to be alive.
