NARRATIVE HISTORY OF FLIGHT (Please type or print in ink)

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State time and point of departure, intended destination, and services obtained.

In my long flying career I have made it a habit to self critique and evaluate my actions. In an effort to determine the factors leading to this accident. I mentally reviewed many times my actions, including sitting in the cockpit. I departed San Carlos airport (KSQL) just after 1100 AM with full fuel, on a beautiful clear day, destination Lampson Field (1o2) about 40 minutes away. After entering the designated code on my Mode S transponder designated by SQL tower, I departed RW12, Contacted OAK tower on 127.2 and was cleared to the OAK 29 numbers then the Coliseum at 2000'. I contacted OAK Tower on 118.3 and was cleared enroute. After clearing Class B airspace I climbed to 4500'. I was transferred to Tracon and later to OAK Center. Approaching 1o2 I listened to the ATIS with most of the information missing. After landing upon turnoff the engine stopped, but I also noticed that the left brake was weak and I had to move my foot upward to get braking action. I restarted and taxied to a tie down. After about three hours I departed with Temp of 98 degrees and density altitude of 5,000 feet. good performance with plenty of power and light weight. At about 5,000 feet I contacted OAK Center for flight following and climbed to 7,500 ft. Approaching Class B airspace I requested descent, I was cleared by Tracon to 2500 Ft direct to the Coliseum, the 29 numbers at 2000 ft. I received SQL ATIS Temp 78 altimeter 2995 wind NW at 10. After talking to OAK Tower on 118.3 and 127.2 was cleared to at or below 1400 ft, contact SQL on 119.0. I was cleared to land on RW 30. After turning left off the RW the engine slowed so I added Power as I was turning left on the Taxi way, I had very little braking on the left brake and I believe at that point I may have got my left heel over the right rudder pedal and my attempt to turn was not successful and my right wing contacted the right wing of a parked aircraft facing the opposite direction.

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

Do not fly unless the brakes are fully functional. The best way to prevent such possibility is to be aware of the potential of foot displacement and adding it to your check list. Contributing factors could be lack of recent experience due to my Wife's treatment and recovery from Cancer where I have been her principle caretaker. Believe me I'd rather be flying. The best way to get an honest appraisal is to eliminate the threat of punitive action. Honesty is the best approach to Safety.
