NARRATIVE HISTORY OF FLIGHT (Please type or print in ink)

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State time and point of departure, intended destination, and services obtained. Personal flight from WA87 to HIO. I received a NOTAM briefing from FSS. I received weather on the computer via www.aviationweather.gov. I departed WA87 at approximately 1550 PDT. I recieved the approatiate ATIS from HIO. Called the tower and received a clearance into Class D for a right downwind to runway 31. I noted the wind was 080 at 7, a quartering tailwind. Approach to land was normal. Touchdown was in a three point attitude and seemed normal. The aircraft started to veer left, I corrected with right rudder and right brake. The airplane corrected hard right, tipped up on the left wing. I applied brakes and the aircraft stopped and tipped up on the nose. I briefed the passenger on egress. I exited the out the left door and helped the passenger exit out the right airplane door. Several individuals approached the aircraft. Myself and one other person tipped the airplane back onto it's tailwheel. We then pushed the aircraft clear of the runway and taxiway.

RECOMMENDATION (How could this accident/incident have been prevented?)**Operator/Owner Safety Recommendation**

I am a retired FAA Air Traffic Controller, as such I tend to do as I'm told by ATC. I believe I should have requested runway 11 which would have eliminated the tailwind.
