Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

Tail separated, engine thrown 50', left main and nose gear collapsed, rear fuselage broken up, front cockpit intact, both doors operational. Minor damage to surrounding area, one cracked building window.

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

Weather was obtained the night before the flight from 1 800 wx brief and updated the day of the flight through ADDS and two Ipad programs Wing X Pro and Foreflight. In addition, ADDS B weather was used enroute. Weather at the airport was obtained from the AWOS.

The flight departed from KAVQ, Marana, AZ at 09:10 local with one occupant. The flight path was Payson then the TUCKUP corridor through the Grand Canyon then direct KEKO, Elko, NV. Arrival at KEKO was 12:20 local. Enroute weather conditions were as expected with mostly clear conditions and 15 to 20 knots of tailwind. Turbulence was light, terrain induced. The AWOS weather at KEKO reported winds between 170 and 150 degrees 19 knots with gusts over 30, density altitude of 8,000. The weather was monitored from 30 miles out to determine the consistency of the direction. The wind favored runway 12 over 23. A right downwind pattern was entered for 12, the downwind was extended to allow more time to monitor conditions on final. The aircraft was flown 80 knots on final with full flaps in a crabbed attitude until over the threshold then straightened for landing. The aircraft touched down in a normal manner at 60 knots. Shortly after the wheels touched the right wing lifted from a gust of wind. I applied full power and full right aileron but was unable to keep the wing from lifting. The aircraft rose and the left wing tip struck the runway. The aircraft then veered to the left off the runway and impacted the ground in a left wing low attitude. Two small trees were struck reducing the impact. The aircraft came to a stop upright the tail section was no longer attached and the engine was 50 feet to the right of the plane. The aircraft stopped two feet from impacting a cement block building. The door was open and I exited the plane amazed to have no injuries.

Without the application of full power and full aileron I suspect the aircraft would have flipped over on it's back which might not have been as survivable.

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

It would have been prevented with a runway more aligned with the wind
