Description of Damage to Aircraft and Other Property <i>(Use additional sheet if necessary)</i> There was no other property damage.		
NARRATIVE HISTORY OF FLIGHT <i>(Please type or print in ink)</i>		
Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible. The accident occurred during the second flight of the morning of a series of local area flights to test the fuel system after overhaul. This was a continuation of a five hour fly-off to assess airworthiness of fuel system. The first flight TO was 0830 rwy 16 (no wind TO rwy) of the Perris Ultralight Airpark located just southwest of the main runway. The first flight lasting 15-20 minute duration; was uneventful and included run-up checks, TO and right crosswind departure climbing to 400 ft; at that altitude one mile west of the field the flight included 55 - 60 mph airspeed turns and smooth climbing/deceding flight; reentered the 45 for a right pattern rwy 16 for overflight at 200 ft; after overflying 16 I departed the pattern to the south and entered a left base for landing rwy 34 the standard no wind runway. There were no other aircraft in the pattern. Landing was uneventful. The plan was to do a series of TC and landings to test fuel system performance. The second flight TO was approximately 1030 rwy 16 departure; normal run-up, normal TO with excellent thrust; began right climbing turn to crosswind at 100 ft agl to the west (Goetz Rd) full power; engine suddenly lost power; lowered the nose; engine running (one cylinder?); switched on the electric fuel boost pump; no help; telephone poles/line and vehicle traffic Goetz road; too close to land safely; elected right turn to north, open field; last remember seeing the ground coming up fast; lost conciousness. I estimate total flight time from TO to impact with the ground 15-20 seconds.		

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

1) Incorporate regular aviation safety discussions during our meetings. Utilize the local NTSB Safety office to conduct occasional briefings and set up a club safety program. Our club is a social flying club with little active discussion of flight safety in general and specifically for our designated TO/landing airspace.

2) I spent too much time establishing situational awareness and the distraction at low altitude I think resulted in a very low altitude wing stall before landing. In my situation I was mentally unprepared for the engine failure that occurred. I should have "what-iffed" engine failure in all elements of the departure flight envelope and practiced to any extent possible the most effective situational responses to maximize my safety (and those on the ground) to make my reactions quicker and more automatic. I know that in a straight out departure engine out you lower the nose maintain airspeed (and straight ahead, its automatic; in a full power crosswind turn engine out I was not prepared, I had not thought about, what-iffed, practiced ahead of time what to do with an engine failure in an unusual (right climbing turn) attitude, so I would not have to try to figure it out when it is already too late.

MECHANICAL MALFUNCTION/FAILURE (If more space is needed, continue on separate sheet)Was there Mechanical Malfunction/Failure? ☒ Yes ☐ No

(If yes, list the name of the part, manufacturer, part no., serial no., and describe the failure.)

Loss of engine power after take-off. I think it was a fuel system delivery problem. Engine operation was normal on previous flight (.6 hr) one hour prior.
