The flight originated from Couer , D' Alene, ID at 2019Z and was to return to Couer D' Alene, ID. in about 3 hours.

I was flying fire patrol for the forest service and was into the flight about 2 hours. I was about 15 nm NE of Kellogg, ID at 7500 -8000 ft MSL when I heard a pop. First thing I thought was possible carb. ice so I pulled on the carb. ice. Then I notice oil on the windscreen and new I had engine failure. Set airplane for best glide and located the only place in the area for a landing. Which was about 12-15 nm away. Soon the windscreen was covered with oil. So asked my passenger to help by looking out the side window to keep from hitting the mountains. Will gliding to the spot I did a Mayday call on 121.5 and set transponder to 7700. The engine kept running the whole time but at a lower setting to keep some forward thrust. Which helped lengthen my glide.

Once getting to landing spot had to slip plane sideways so I could see what was ahead of me in my flight path. Then I noticed a tree in the middle of the field, so applied some power to clear the tree. Which was the last of the power. As I was about to touch down I seen a power pole off to the left, so I then forced the plane down quickly. This when the nose gear broke off. The nose gear breaking off stopped me from ending up in the trees. During this time the right wing struck the ground. Once stopped I and the passenger evacuated the airplane and I made sure I had everything shut off, fuel, mixture and master switch and all electrical.
