NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

With pilot under instruction flying, aircraft departed SQL Runway 30 normally intending a "right downwind" departure for an instructional flight to Byron (C83). On upwind leg, SQL ATCT requested that length of right crosswind leg be extended to San Francisco Bay shoreline for traffic separation purposes. Reaching shoreline and performing 1000 AGL climb checklist, the pilot under instruction reduced power from takeoff (maximum sea level) to climb (25" MP, 2500 RPM), then noted that throttle movement and resistance were abnormal. Instructor pilot then observed discontinuity of throttle control cable and confirmed no control of engine power, constant at 25" MP. Aircraft was then turned to a downwind heading and SQL ATCT notified of an immediate return to the airport. Aircraft speed was regulated by propeller control, mixture, and drag (landing gear, flaps). An extended downwind and long final approach behind a preceding landing aircraft ended with a crosswind landing at normal speed on SQL Runway 30. Mixture was reduced to idle cut-off crossing Runway 30 threshold and aircraft rolled out normally. Mixture control was advanced to provide sufficient momentum to taxi clear of the runway at exit taxiway C and was then shutdown on parallel taxiway K.
