NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

The day started off with the normal preflight and startup, with approximately 17 gallons of fuel, we taxied out for a south departure and had to wait a while for tower to sequence us into the pattern. I remember looking down and seeing 25 minutes before we had even took off. We were assigned right traffic for 21-R and on downwind Mitchell started his downwind checks, tower mentioned winds 160 @ 5 Knots but the flag at the approach end of 21-R was favoring 21-R and the water also indicated light winds favoring 21-R. The temperature was reported at 26°C. Mitchell setup properly at 75 knots and 700 feet AGL with the power at 17 inches, the entry was pretty smooth and he was able to catch the RPM in the green. The glide went well keeping 70 knots and RPM in the green but at about 400 feet we experienced a fast rate of descent and a drop in rotor RPM down to approximately 92% I immediately said "I have controls" and started applying down collective throttle on and aft cyclic to rebuild RPM. I felt the collective start to go up and said again "I have controls" and Mitchell put his hands in his chest but at that point the RPM dropped to about 85% and a shudder began in the rotor blades. I controlled the helicopter to the dirt and tried to add a little aft cyclic right before impact to slow our rate of descent.
