Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

Most of aircraft has very substantial damage I do not plan to repair or rebuild this aircraft. If the crankshaft shows damage I will not rebuild the engine.

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

I inspected aircraft before departure. Everything checked out good. I departed HQM airport at (apx) 9:00 A.M. Departure was from runway 24. I climbed to a altitude of 1000 ft, turned South over the Bay. Turned and Climbed West to 2500 ft. Altitude toward Westport. At Westport I turned South down the beach toward the far end of Long Beach peninsula. I then Crossed over the channel West of Raymond and flew down the Long -Long Beach.

At the end of Long Beach I made a 180 degrees turn and flew back on the East side of the peninsula and enjoyed the beautiful view of the light houses. and property. I crossed over the Westport channel toward Damon Point.

A little ways off of Damon point, I noticed the volt meter going erratic and dropping in voltage from positive to negative. All of a sudden the entire electrical supply shut down. The entire panel went dead killing the (2) electric gas pumps.

I Looked to see how far I could glide. Ocean Shores, looked to far at 5 miles and Westport at least 5 miles. I looked at the Northwest and decided I could make it to the Tall Shrubbery West of Damon point. I lived in Ocean Shores 14 years and know the size of the shrubbery at 8 ft. tall. With no decent roads, roads to small, people on the beaches, I decided to land on the shrubbery clear of houses. It was almost 10:00 A.M. and time to land. I kept the plane at about 70 mph set my course West toward a huge shrubbery patch.

I pulled back on the stick and gently as possible glided smoothly in on top of the brush. Speed down to about 35 mph and the plane gently going down. The plane slowed down gently skimming the shrubs and dipped toward the ground. The right wing caught one big bush and turned the plane on the ground to face the Northeast, coming to a hard rest.

I jumped out immediately and checked to see if there was any fuel leakage from the wings.. No leakage. Power dead with no fire.

I received wounds to left inside left arm and harsh abuse of my left side rib cage. The plane stayed in one piece except for some plastic from the canopy broken.

With your permission I had plane removed by friends the same night and taken back to Montesano, Washington.

I am going to hanger today and take a picture of the altimeter reading. I will send it later

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

I suggest that a back up 12 volt battery back-up be placed in the aircraft using only electric fuel pumps. You must install a switch over switch to power the 2 electric fuel pumps in case of a emergency electrical loss.

This could have prevented a loss of engine power due to a electrical failure.

MECHANICAL MALFUNCTION/FAILURE (If more space is needed, continue on separate sheet)Was there Mechanical Malfunction/Failure? ☒ Yes ☐ No*(If yes, list the name of the part, manufacturer, part no., serial no., and describe the failure.)*

I think that there was a short in the electrical service in the wiring. I will wait for the FAA inspection and get a better picture when I am informed.
