Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

Damaged main rotor blades, and tail cone is chopped off. The rear strut bar is bent due to hard landing. Helicopter landed right side up and did not receive any known damage done to main fuselage nor engine.

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

Events of the Engine Failure on Aug 12, 2016

Weather was clear. 78 degrees F. Winds at 3kts from the South.

12:15 pm: I flew back to our loading spot after spraying one load to get another.

12:17 pm: After fill up, I flew back to the field to spray.

12:20 pm: I started my spray pass heading west, starting at the east edge of the field.

12:22 pm: After my first pass I began my second one back to the east, across the field. Cruising at 50-55 kts.

12:24 pm: I was nearing the end of the field. I simultaneously heard a pop as well as a thump that resonated through the helicopter at about the same time that I was turning off the spray system. I am very observant and knew that nothing had hit me. It startled me to wonder what it was that made that noise.

12:24-12:25 pm

By about this time I had taken a glance out my right side door and saw chemical spewing in the air and along the pilot side of the helicopter. The source of the pop and thump was due to a close threaded nipple breaking on the out flow side of the pump, the part that goes to the spray booms. Why it broke? I have no idea. I immediately went to kill the pump using the kill push button that is located on the cyclic by the spray on/off switch, which takes 1-2 seconds of holding to kill the pump. As I was doing so, the helicopter, at the same time, began to drop dramatically in engine and rotor RPM. They reached to about 93%.

All this took place within 10-15 seconds. To noticing my pump break, killing it, then entering autorotation to the ground.

As the RPM's dropped and I could hear the helicopter motor sputtering for air. It sounded as though it was being choked out. I performed the correct emergency procedure, which is stated in the Pilots Handbook of the R44, of lowering collective and rolling throttle on to re-establish the RPM. In doing so to revive the engine. As I performed the procedure of lowering collective and rolling throttle on, the engine motor had ceased. I was at an altitude of around 50-75 feet and there was no time nor altitude to even try to restart the engine.

After I landed, I shut off fuel and made sure there were no fires.

The spray system pump on the helicopter is to be mounted on the pilot side skid according to the Simplex Spray System Manual. It cannot be mounted on the opposite side. The engine air filter compartment is located above and behind the spray pump on the pilot side of the helicopter. When the close threaded nipple broke on the spray pump, the chemical spewed out and upward into the air filter, ultimately causing the engine to choke out and fail. It was a freak accident.

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

There was no way of knowing in order to prevent this accident from occurring.

MECHANICAL MALFUNCTION/FAILURE (If more space is needed, continue on separate sheet)Was there Mechanical Malfunction/Failure? ☒ Yes ☐ No

(If yes, list the name of the part, manufacturer, part no., serial no., and describe the failure.)

There was a failure to a close threaded nipple that was provided by Simplex Manufacturing of the helipod for the Robinson R44 helicopter. We could not find a serial number on the part. The part has been on the machine for only 24 flight hours. The part was actually used for only 18 of those hours.
