DAMAGE TO AIRCRAFT AND OTHER PROPERTY**Aircraft Damage**

- ☐ None ☒ Substantial
☐ Minor ☐ Destroyed
 ☐ Unknown

Aircraft Fire

- ☒ None ☐ Both Ground and In-Flight
☐ In-Flight ☐ Fire at Unknown Time
☐ On-Ground ☐ Unknown

Aircraft Explosion

- ☒ None ☐ Both Ground and In-Flight
☐ In-Flight ☐ Explosion at Unknown Time
☐ On-Ground ☐ Unknown

Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

Front windshield left side broke; Right skid forward of front strut broke off; Left skid at front strut cracked; Damage to both main rotor blades and tail rotor blades; Tail cone damage on left side by contact with main rotor blade; Front right nose under windshield damage from contact with ground; stone through aft panel covering scroll fan; buckling just forward of mast cowl on roof of cockpit

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

On Friday, August 26, 2016, approximately 0740 HST the student and I left from Kilo ramp of KOA to transition to the North Practice Area (NPA) to practice maneuvers.

We entered the NPA and I told the student to make the first approach to a spot in the middle of the gravel road where there is plenty of clearance. The spot chosen was on one of the gravel roads in the NPA, has a wide area which is flat and smooth with no large rocks. He started to set up the approach while on a left downwind, we turned onto base then final and everything was looking great so I told him to complete the approach to a full stop on the ground.

He continued the approach smoothly and the initial set down was very soft and smooth as well. Once the skids were on the ground, he then continued to lower the collective towards the full down position, then the helicopter started to rock in a fore and aft motion. As the intensity quickly increased and I noticed the alarm on the student's face I came on the controls.

From that point on, all I recall is that we were in the air again in uncontrollable flight. The helicopter was oscillating intensely then stopped at the final position; approximately 20-30 feet at a little more than a 45° angle to the forward and left from our initial touchdown spot. Once on the ground again and somewhat stabilized I pulled the mixture then the rotor break. Once the rotor had stopped we both exited the aircraft.

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

Unknown

MECHANICAL MALFUNCTION/FAILURE (If more space is needed, continue on separate sheet)

Was there Mechanical Malfunction/Failure? ☐ Yes ☐ No
(If yes, list the name of the part, manufacturer, part no., serial no., and describe the failure.)

Unknown
