Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

From the Company Director of Maintenance: The Main Rotor Transmission Striker Mount Studs will need to be replaced. The Main Rotor Transmission Striker will need to be replaced. The Isolation Mount will need to be replaced. The Engine-to-Transmission Driveshaft lost its grease and will need to be sent out for inspection/repair.

From the OAS Aircraft Maintenance Inspector: Main Drive Shaft forward coupling, Damaged, Forward boot separated from coupling, 204-040-755-5 (Black/ Brown in color). Coupling grease was scattered throughout aft transmission area, the main shaft appeared to have contacted the forward firewall. Forward coupling had contacted Isolation mount, metal shavings were apparent. Upper Right hand top Transmission Cowl, inner diameter damaged, cracked with a piece of composite material missing. Main Rotor Mast had contact with the 

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

On September 12, 2016, North Cascades National Park Aquatics was flying a mission to sling cargo loads into Firn and Skymo Lakes from the Diablo Lake /Colonial Creek helispot. A National Park Service (NPS) employee was flying with the pilot to Firn Lake where he was going disembark, attach a long line, and wait to receive an external load.

The flight took off at approximately 1340 PDT and arrived at Firn Lake at approximately 1345 PDT. The pilot conducted a high reconnaissance to locate a landing area and identify a spot to place the cargo. The pilot selected a landing spot on the south end of the lake in a flat area.

After landing, the pilot rolled the throttle to idle and the NPS employee exited the helicopter. While he was latching the door the helicopter suddenly started to move with lateral oscillations. (NPS employee's initial statement used the terms "bounce and lurch."

The pilot immediately "adjusted the flight controls" and increased the rotor RPM and the lateral oscillations stopped. The NPS employee stated that he got back into the helicopter, plugged in his headset cord and asked the pilot what happened and the pilot said she was going to shut down, which the pilot did as they were talking.

After shutting down the pilot and NPS employee exited the helicopter and opened the transmission cowl. The inside of the cowl was splattered with grease and metal shavings. The NPS employee stated that he could smell smoke coming from the transmission area and heard metal on metal when in the cockpit before the helicopter was shut down.

The pilot and NPS employee were picked up later that day by another helicopter operated by the same vendor.
