

NATIONAL TRANSPORTATION SAFETY BOARD PILOT/OPERATOR AIRCRAFT ACCIDENT/INCIDENT REPORT

This form to be used for reporting civil and public aircraft accidents and incidents

BASIC INFORMATION

Accident/Incident Location

Nearest City/Place: MOSS BEACH State: CA

ZIP: 94038 Country: SAN MATEO

Latitude: 37.51991 Longitude: -122.51130

(Enter in decimal degrees or degrees:minutes:seconds)

Accident/Incident Date/Time

Date: 11-18-2016 Local Time: 11:20
mm/dd/yyyy

Time Zone: PST

Collision with Other Aircraft: ☐ Midair ☐ On-ground ☒ None

AIRCRAFT INFORMATION

Registration Number: N6610D

Manufacturer: CESSNA

Model: 172N

Serial Number: 17272897

Year of Manufacture: 1980

Amateur-Built: ☐ Yes ☒ No If Yes: ☐ Kit/Plans ☐ Make: ☐ Original Design

☒ IFR-Equipped and Certified

☐ Commercial Space Flight

☐ Unmanned Aircraft

Maximum Gross Weight: 2550 lbs

Weight at Time of Accident/Incident: 2250 lbs

Number of Seats: 4 Flight Crew Seats:

Cabin Crew Seats: Passenger Seats:

Number of Engines: 1

Category of Aircraft

- ☒ Airplane
- ☐ Balloon
- ☐ Blimp/Dirigible
- ☐ Glider
- ☐ Gyroplane
- ☐ Helicopter
- ☐ Powered Lift
- ☐ Rocket
- ☐ Ultralight
- ☐ Unknown

Type of Airworthiness Certificate

Exhibit 1: NARRATIVE HISTORY OF FLIGHT

Date of Accident: November 18, 2016

Before I headed to my home airport that morning, I verified that the forecasts for KHAF that I had been observing were accurate. I used ForeFlight. The METAR forecasted clear weather with winds from the southeast. I proceeded to the airport and performed a preflight on the plane. Finding no discrepancies, I departed under VFR and requested flight following by ATC to my destination, KHAF.

I flew direct to SAU then south to KHAF. I climbed to 4500 feet MSL and then activated the autopilot. The cruise was smooth and clear. After reaching Richmond, I turned off the autopilot. I then descended to remain clear of the SFO Class B airspace, as instructed by ATC. When I reached SAU, I headed south, continuing my descent to 1300 feet MSL, staying clear of Class B airspace. ATC then canceled flight following.

I radioed the KHAF CTAF, stated my location, and asked for traffic information. A response stated "winds from the southeast up to 15 knots and runway 12 was the last runway used." This information agreed with what ForeFlight was reporting.

I crossed the runway over the "12" numbers at a 45 degree angle to enter the upwind for runway 12. The weather was clear and air smooth. I continued to crosswind and called CTAF stating I was entering left downwind for runway 12 at 1500 feet MSL. I flew downwind while descending. Abeam the numbers, I was at 1000 feet MSL. A short time later, I initiated a 180-degree sweeping turn onto final. I entered final with the centerline directly in front of the nose, but high (according to the VASI lights), about 800 feet MSL, airspeed 65 knots. I reduced power to intercept the glide slope.

With full flaps (30 degrees), on final, my speed was now 60 knots and about 500 feet MSL I intercepted the glideslope and felt very light turbulence. I was concerned that if the turbulence continued during my approach, I would be vulnerable to strong buffeting at normal approach speed leading to a rough landing. As a countermeasure, I elected to land at a higher airspeed. I therefore decreased my flaps to less than 20 degrees and applied additional power to stay on the glide slope. Immediately after making these adjustments, I felt strong turbulence violently rock the plane. My wings dipped first to the left and then to the right. Simultaneously, I felt a strong downdraft leaving the plane in a very steep right bank.

I fought to level the wings and gain altitude: I applied full power, slight back pressure on the yoke and left aileron and rudder, but nothing seemed to correct my decent and steep right bank. I knew that if I couldn't gain altitude, I would have to make an emergency landing. I ruled out the shoreline because of my low altitude and presence of houses. I noticed runway 12 coming into view about 90 degrees to my right, but out of reach due to my low altitude. I felt my banking beginning to correct, but I noticed large trees come into view on my right. Wanting to avoid the trees, I tried to drag the tail into the ground. Next I recall closing my eyes to try to protect them and spinning, followed by lots of debris falling.

Respectfully submitted,

Stephen R. Magee
