Andrew –

The statement below is what I received from Rudy concerning the activities last night at the aircraft. The Mark Lomtong he references works for Wheels up. I believe Dan Morris is another one of our service center folks.

See you Thursday at 0900.

Henry J. Soderlund

Senior Air Safety Investigator, Air Safety Investigations

Textron Aviation
[REDACTED]

Good morning everyone

Mark Lomtong, Dan Morris and I were at the A/C. Mark asked us to pull the CVR for him and asked us to see if the pin would come out. The pin slid right out with no effort we took picture of it and slid it back in to it's original position. After talking to Henry Soderlund I told Mark that we need to turn the CVR over to the FAA Inspector.

When the inspector return with the pilots, We told them what we did and we left the CVR in the baggage compartment and locked the A/C up.

No work was done to the A/C today 8/29/17

If you have any questions feel free to call me anytime.

Rudy Martinez
