Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

Aircraft impacted trees. Both wings have missing skin. Unknown damage to spar and fuel tanks. Propeller bent and apparent bending of fuselage. Starboard side windows broken.

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

On approach to Harris Ranch (308) at approximately 8nm from the field, 1000 feet AGL or less and about 130 KIAS, the engine hiccuped then about 15 seconds later began running rough and producing no power. The engine appeared to still be running until impact. I switch fuel tanks from the right tank to left tank and selected wide open throttle and mixture full rich. I lowered the flaps to T/O setting to help with glide performance. I had to trade some energy to ensure safe separation from large transmission power lines and did not have enough energy to glide to an open field. Prior to impacting the trees, I had the passenger unlatch the door to facilitate egress. Upon contact with the trees the plane spun about 90 degrees to the left and came to rest against a tree. I immediately secured the fuel and there was no fire. Before egress, I turned off the ELT since we were already in contact with 911.

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

We had enough fuel to get to our destination, but not all in the tank that was being drawn from. Better scan of the fuel flow would have helped prevent the accident.

MECHANICAL MALFUNCTION/FAILURE (If more space is needed, continue on separate sheet)
