NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

Pre-flight

Obtained Foreflight briefings starting 12/9/16 for anticipated route of flight. Direct KTRM no winds 3:45 650 nm 55 g fuel required. Monitored changing weather for mountain obscuration, winds aloft and Airmets for Zulu, Sierra, Tango. Revised projected route to stay clear of mountains to overfly KCOS, KALS, KSKX, KTRM. New distance 747 nm, 4hr12m 62.6 gallons. Contacted Flight service prior to flight at roughly 13:00 for updated airmets, weather and conditions. Didn't file VFR flight plan as exact route of flight uncertain for turn to west. Received airmets for turbulence, icing, and mountain obscuration. Pre-flighted 761SZ at hanger and called for fuel top-off. Denver Jet Center filled 100 LL to rim. Rechecked bleed valves and confirmed full fuel.

Taxied to Charlie 1 at runway 10 for south departure. Completed POH run ups and checks in about 3 minutes. Contacted ground for south departure VFR and cleared to runway 10 and tower. Tower cleared for takeoff runway 10 and south departure.

Flight Log

Takeoff runway 10 full power, 10 degree flaps, full props and mixtures. Climb out at 5-600 fpm trimming for climb, gear up, flaps up, manifold to 26", RPM 2460. Climbed direct KCOS. Leaned to 85-90 pph, CHT 1,450-1,520. Contacted COS approach for flight following at and above 10,500 to clear class C airspace. Clearing COS transferred to Denver Center and reminded to maintain appropriate VFR altitude. Due to turbulence and mountain obscuration could not turn west so descended to 9,500 at heading 175.

Cleared K PUB then switch to ABQ center. Still no ability to turn west. Modified flight following to KSKX then KSAF to stay clear of mountains and clouds. Near KLAS cloud cover to the north was able to turn west.

Evaluated fuel stop at KSAF but recalculated fuel flow and head winds (about 3 knots 8,500 and 6 knots at 10,500). Descended to 8,500 through ABQ approach (monitoring landing runway and departures) airspace then diverted slightly south to avoid Mt Taylor. Stayed slightly south to avoid Gallup TFR.

Continued with fuel flows between 12-15 GPM from fuel meter accumulator and 80-90 ppm and leaned to < 1,500 CHT. Fuel gages showed half and accumulator about 55 gallons remaining passing KSAF.

Continued with ABQ center past Phoenix. Ascended to 10,500 for higher clearance over Mount Union area.

Switched to SoCal Center and remained with them through Desert Center. Switched tanks to right tank that showed about a quarter fuel and left at just under 1/4 fuel. Descended to 8,500 for initial descent in KTRM. Monitored Sirrus weather where winds were 014 at 6, headwind 3. Planned runway 17 landing from CONES intersection at 6,500 to avoid terrain and allow visibility. Negative awos. At roughly 35 km received awos but winds now 330 at 5-6 sky clear. Modified approach to RNAV 35 to initial approach fix at SHADI 6,500 but decided too far out and advanced to Rodge for straight in 35. SoCal called with 2nd request airport in sight and I did have airport a 1-2 o'clock 15 miles.

Contacted my dad via text that I would be in about 6:15 to Desert Jet Center.

Switched to advisory 123.0 for long right base for 35 Cochran – no response. 1st Set of flaps at 140 knots, manifold back to 15". Held off on gear. Checked tanks meter with both at just below 1/4 and accumulator showing 22 gallons remaining.

Switched tank to left and motor failed.

Returned switch to right. Full Throttle, mixture, props, and pumps on. Cranked but no fire. Flaps up and trimmed yoke back to 80 knots. Lights on saw terrain and avoided hill side to right. Flew between peaks down valley but no real terrain recognition. Impacted and turned off master, avionics, pumps, not sure if I moved fuel selector.

Exited out pilot door to clear aircraft.

Post Flight

Stood outside aircraft for 5-10 minutes. ELT on solid otherwise all off. Came to rest on slope with engine facing down and plateau about 30 yards up behind aircraft.

Emptied luggage and flight bag. Portable radio dead but Stratus and Foreflight on Ipad working.

Couldn't find phone that I had been charging so used apple watch to make phone calls.

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

1. Review fuel tank switching procedure to not have fuel pump running continuously.
2. Precautionary fuel stop at intermediate to avoid operation below 1/4 tank fuel
