Description of Damage to Aircraft and Other Property (Use additional sheet if necessary)

NARRATIVE HISTORY OF FLIGHT (Please type or print in ink)

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

After a 25 minute, post maintenance (annual inspection) flight at an altitude of 1000 feet, I began a gradual decent into the Willows airport. I approached the airport on a straight-in final for Runway 31 and made a slight reduction in the power setting around 3/4 of a mile from the approach end of the airport. The very instant that I made the reduction in throttle, I heard a small pop noise. The noise was unverified and was not accompanied by any vibrations or the engine shutting down. However, I began to notice a reduction in airspeed. I immediately advanced the the throttle back to normal cruise power and did not notice any gain in power or airspeed. At this point my focus moved to straight ahead and flying the airplane. The aircraft was beginning to sink rapidly at this point. I made one last attempt at a power change to try and get anything I could. This action yielded no results. I left the throttle in the full forward position, and it remained there for the duration of the flight. The aircraft was quickly approaching a canal on the south end of the airport. At the last moment I added a small amount flaps and the aircraft cleared the canal bank. As the aircraft cleared the canal, it was still sinking very rapidly. The main landing gear touched down on a gravel road (airport boundary) perpendicular to my direction of flight in a slight nose high attitude. The tail wheel hit, just short of the same gravel road, approximately 3-4 feet down in a small ditch. This touchdown resulted in an immediate reversal of the aircrafts attitude. The aircraft was now in an unrecoverable tail high attitude. The aircraft went a short distance before the propeller struck in the wet field on the airport property and began to flip over. The plane immediately came to rest upside down with the nose facing to the south, opposite of my direction of flight, just east of the runway 31 centerline. I released myself from the seat-belts and exited the aircraft after breaking through the side Plexiglas window on the east side of the aircraft. I noticed the aircraft/engine still making some noise and shut the engine off with the fuel mixture idle cutoff and turned off the main fuel valve to the aircraft.
