Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

Left and Right wings, Canard, wheelpants, propeller, engine cooling system. No damage to other property. After recovery of aircraft, considerable corrosion damage to electronic parts, due to salt water immersion, was noted.

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

Preflighted aircraft; rolled aircraft out of hanger; started engine; obtained ATIS information and set altimeter; taxied to runway 24 runup area; went through preflight and engine runup checklist; obtained tower clearance for right closed traffic; took off on runway 24; made a climbing right turn to 1035 feet; rolled out on right downwind; reduced power to obtain 90 KIAS; was cleared for touch & go; reduced power to obtain 85 KIAS; turned base, then turned final; reduced power to idle; adjusted aircraft attitude to obtain 80 KIAS; allowed aircraft to descend toward touchdown on runway 24; decided that touchdown point would be further down runway than desired; advanced power to takeoff power; engine responded with takeoff power; suddenly engine power rolled off to idle; I was unable to restore power and made a forced landing in a salt marsh about 1/4 mile past the end of runway 24. The aircraft came to rest in a drainage canal and began to fill with water. I switched off the electrical circuits, exited the aircraft over the left strake, after closing the canopy. A highway patrol helicopter picked me up and returned me to the airport, where I was checked out by emergency personnel and released to go home. Until I attempted the go around, the engine and aircraft were performing flawlessly.

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

This incident occurred as a result of engine power loss at low altitude and airspeed. There was nothing to do but make a forced landing out of a bad situation.

MECHANICAL MALFUNCTION/FAILURE (If more space is needed, continue on separate sheet)Was there Mechanical Malfunction/Failure? ☒ Yes ☐ No

(If yes, list the name of the part, manufacturer, part no., serial no., and describe the failure.)

1991 Mazda 13B rotary engine, S/N 001JS. After starting a go around and advancing the power from idle to takeoff power, the engine began to produce takeoff power; then suddenly the power rolled off to idle. Investigation of the engine and all of its support systems, after the incident, revealed no malfunctions. The engine could not be test run, after aircraft recovery and inspection, due to water in the engine. Engine teardown may reveal the cause of the sudden power loss.
