Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

Aircraft sustained damage to the main gear, fuselage, engine and propellor. The gear bent up towards the engine and the fuselage and lower wings skid on the ground. The engine and propellor looked broken and bent.

The property the aircraft landed on has skid marks and damage was minimal.

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

The original takeoff of the day was from KEDU to KHAF for lunch. The flight was uneventful and approx. 1 Hr. The day started full fuel (42 gal) and great weather and light winds. The aircraft with myself, fuel, and 1 passenger was within the normal envelope for weight and CG and below the max gross weight for flying. One thing I noted was after the walk around I saw fuel dripping from under the wing and had to go adjust it to stop the drip on the left wing.

After having lunch at KHAF, we had appx. 30 -32 gal of fuel remaining which was more than required for the next leg of our flight to KAUN with 1.5 hr reserve fuel. The flight was uneventful and upon arrival to the terminal area, I cancelled flight following to do sightseeing around the Oroville Dam.

It was after leaving the Oroville area that the incident occurred. It began with a loss of thrust which I immediately performed a turn to the nearest airport, climbed the aircraft trading airspeed for altitude, maintained best glide speed and quickly checked the aircraft for a cause. At 3,000MSL, I was appx 2,000AGL which left little time for decision making. The terrain in gliding distance was rolling hills full of trees, winding road, powerlines, and not many good areas to land. There was no fire, fud, and the engine wasn't frozen, I tried a restart. Unsuccessful. Switched the fuel tank source. Retried a restart. Unsuccessful. After that, my focus gliding the aircraft was limited to a forced landing. I did notice a popped PSRU circuit breaker on the dash popped but was focused on landing the aircraft at that time and did not troubleshoot.

I did my best to aviate and prevent the the situation from becoming worse. I navigated to the field and when time and conditions permitted, I spoke with the nearest approach frequency to state my intentions.

Upon landing the aircraft, I egressed and was met by an ambulance within minutes.

The aircraft landed in mud and came to a stop very quickly.
