Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

The aircraft hit one power line. Right and Left Wingtip tanks hit traffic lights, puncturing and igniting fuel while still on approach to forced landing. The aircraft landed hard, damaging the right and left wing. The empennage was also damaged. The propeller struck asphalt as when the nose gear collapsed. Some vehicles were damaged but I am unsure of how many and the extent of the damage.

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and and location, services obtained, and intended destination. Provide as much detail as possible.

I had arrived at KPAE approximately 1330 local time to pick up some aircraft records. I purchased 41.2 gallons of 100LL from Castle and Cook FBO, bringing our total to 70 gallons on board. I performed a pre-flight check, sumping and visually checked fuel quantity and quality. I checked the general condition of the aircraft including flight surfaces, antenna, landing gear and struts, alternator belt and engine oil, and visually found all of these items appeared normal. My passenger and I got into the aircraft. I was piloting from the left seat and my passenger was seated in the right front seat. I notified family at home that we were departing soon. I started the engine, priming with fuel and using the electric fuel pump. After engine start up, I immediately checked oil pressure and turned off the electric fuel pump to ensure the engine-driven pump was operating. The engine continued to run normally for taxi and the run-up, with the electric fuel pump switched to the off position. This indicated to me that the engine driven pump was functioning. I then proceeded to taxiway Bravo and received clearance to taxi to runway 16R via Bravo and Alpha4. I pulled into the run-up area and checked available take-off distances, which was more than 5000 feet at 16R and A4. I commenced my pre-takeoff checklist which included flight control checks, primer locked check, instrument checks, and an engine run-up. During the engine run-up, I put power up to 1700 RPM and checked both magnetos. The right dropped about 100 rpm and the left dropped about 110 rpm. Both returned to normal. I tested the carburetor heat which presented the normal drop of RPM when the knob was pulled out. The mixture was left full rich because the field elevation was below 3000 feet. The AFM suggests full mixture at low altitude departures. Next I cycled the propeller twice and checked the engine instruments, which all indicated in the green, including fuel pump pressure, oil temperature, oil pressure and the vacuum. I retarded the throttle to idle, turned on the electric fuel pump, and called for my take off clearance. While being given my clearance, I made one last check of the electric fuel pump which was on, fuel selector switch which was in the right tip position, trim, and turned on my position lights and strobes. We pulled onto Runway 16R about 1538, lined up on center line, and advanced the throttle to full power. The aircraft accelerated like normal and the airspeed indicator came alive. I checked the RPM and manifold gauges, which were 2600 and 25 inches respectively. I rotated at an indicated speed of 80 MPH and began climbing while allowing the aircraft to accelerate to 90mph for a cruise climb. The control tower called for me to offset to the right for departing traffic. I acknowledged over the radio and began offsetting when the engine lost power. It sounded as if it had run out of fuel. I quickly reached down to check the fuel selector valve which was still in the "Right Tip" position. I checked the electric fuel pump and checked the mixture was full rich. I also checked that the primer was locked and the carb heat was off. I made an emergency call to the tower of "3457W emergency, I have lost power and have to put it down". I did not hear a response from the tower. I immediately began looking for a place for a forced landing, noting I was only 200 to 400 feet AGL. I observed a swampy/bushy area with taller trees off my nose and thought it not to be desirable for a forced landing. I also observed a six-lane highway running generally North and South, this roadway was full of vehicles and was to my right. I later learned that this roadway was the Mukilteo Speedway. Further to my right, running generally East/West was a 5-lane, physically divided road, with no traffic currently observed in the westbound lane, I chose this as my best chance at surviving the forced landing and avoiding people on the ground. I later learned this road was Harbour Pointe Blvd SW. The noticed the propeller continued to turn at 400 to 500 rpm, but was not producing any thrust. The aircraft then clipped a power line. Because I was still turning to the right to line up for a forced landing, the left wing tip contacted a stop light which was elevated on a pole. I initially tried to fly over the power lines and signal lights, but didn't have the altitude or speed. We then impacted the ground, sliding about 75 to 100 yards before stopping at a curb. From the time of contact with ground, I had no directional control. I had no injuries whatsoever. My only passenger was checked at the hospital and complained of muscle soreness. One female occupant, of a vehicle on the ground near the site, reportedly received minor injuries and received care at the scene. I do not know who this is or if this individual sought further care, nor do I know the nature of her injuries.

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

I don't know if I could have reasonably prevented this. Everything I did was standard procedure and there was no indication that something was imminent. The one big thing I would change is requesting full length runway instead of accepting an intersection departure. With an additional 4000 feet, I may have been able to land straight ahead on what was left of runway 16R. I didn't request full length because of a large Boeing jet at the departure end on the runway when I got to the run up area. When we were cleared for takeoff, he had taxied off and was taxiing back to line up again for departure.
