

NATIONAL TRANSPORTATION SAFETY BOARD

NTSB Form 6120.1

PILOT/OPERATOR AIRCRAFT ACCIDENT/INCIDENT REPORT

Email the pilot/operator aircraft accident/incident report to the investigator-in-charge of your accident/incident. If email is not available, mail the report per the instructions below.

If your accident/incident occurred in Maine, Vermont, New Hampshire, Massachusetts, Connecticut, Rhode Island, New York, New Jersey, Pennsylvania, Maryland, Delaware, Virginia, West Virginia, Kentucky, Tennessee, North Carolina, South Carolina, Mississippi, Alabama, Georgia, Florida, the District of Columbia, Puerto Rico, or the US Virgin Islands, send the form to: NTSB, ERA, 45065 Riverside Parkway, Ashburn, VA 20147.

If your accident/incident occurred in Ohio, Michigan, Indiana, Wisconsin, Illinois, Minnesota, Iowa, Missouri, Arkansas, Louisiana, North Dakota, South Dakota, Nebraska, Kansas, Oklahoma, Texas, Colorado, or New Mexico, send the form to: NTSB, CEN, 4760 Oakland Street, Suite 500, Denver, CO 80239.

If your accident/incident occurred in Montana, Wyoming, Idaho, Utah, Arizona, Nevada, Washington, Oregon, California, Hawaii, or the territories of Guam or American Samoa, send the form to: NTSB, WPR, 505 South 336th Street, Suite 540, Federal Way, WA 98003.

If your accident/incident occurred in Alaska, send the form to: NTSB, ANC, 222 West 7th Avenue, Room 216, Box 11, Anchorage, AK 99513.

Rules pertaining to notification of aircraft accidents and incidents, as well as overdue aircraft are found in 49 *Code of Federal Regulations* (CFR) Part 830 http://www.ecfr.gov/cgi-bin/text-idx?c=ecfr&tpl=/ecfrbrowse/Title49/49cfr830_main_02.tpl. These rules state the authority of the NTSB, define accidents, incidents, injuries, and other terms, and provide procedures for initial and immediate notification of accidents and incidents by aircraft pilots/operators.

A. APPLICABILITY

The pilot/operator of an aircraft shall send a report to the office listed above, based on accident/incident location; immediate notification is required by 49 CFR 830.5(a). **The report shall be filed within 10 days after an accident for which notification is required by Section 830.5, or after 7 days if an overdue aircraft is still missing.**

An aircraft accident, as defined in 49 CFR 830.2, is determined as an occurrence that involves a fatality or serious injury, or substantial damage to the aircraft. For occurrences that do not involve a fatality, the determination that the occurrence is an accident can be appealed by writing to the Director, Office of Aviation Safety, NTSB, 490 L'Enfant Plaza, S.W., Washington, D.C. 20594.

INSTRUCTIONS TO PILOTS/OPERATORS FOR COMPLETING THIS FORM

It is necessary that ALL questions on this report be answered completely and accurately.

If more space is needed, continue on a blank sheet of paper.

Nearest City/Place: Use the name of the nearest community in the state where the accident/incident occurred.

Date/Time: Indicate the date and local time of the event. Be sure to indicate the time zone.

Phase of Operation: Indicate the phase of operation during which the accident/incident occurred.

Aircraft Information: Enter aircraft make and model information as indicated on the aircraft registration certificate, including series. If the involved aircraft is certified as "amateur-built," include the name of the producer of the kit or plans, unless an NTSB employee instructs otherwise.

Maximum Gross Weight: Enter the certificated maximum gross weight for the aircraft involved in the occurrence. This should be the same as the maximum gross weight indicated on the aircraft weight and balance documents.

Engine: Enter engine make and model information as indicated on the engine data plate.

The NTSB uses this form for aircraft accident prevention activities and for statistical purposes. NTSB regulations (49 CFR Part 830) require that **ALL** questions be answered completely and accurately. Completion of this form will take approximately 60 minutes. The NTSB does not guarantee the privacy of any information provided in this form. You need not complete this form unless it displays a valid OMB control number, in accordance with 5 C.F.R. § 1320.5(b), which applies to this collection of information.

B. DEFINITIONS

1. "Aircraft Accident" means an occurrence associated with the operation of an aircraft that takes place between the time any person boards the aircraft with the intention of flight and all such persons have disembarked, and in which any person suffers death, or serious injury, or in which the aircraft receives substantial damage. For purposes of this form, the definition of "aircraft accident" includes "unmanned aircraft accident," as defined at 49 CFR 830.2.

2. "Substantial Damage" means damage or failure that adversely affects the structural strength, performance or flight characteristics of the aircraft, and that would normally require major repair or replacement of the affected component. NOTE: Engine failure or damage limited to an engine if only one engine fails or is damaged, bent fairing or cowling, dented skin, small puncture holes in the skin or fabric, ground damage to rotor or propeller blades, and damage to landing gear, wheels, tires, flaps, engine accessories, brakes, or wing tips are not considered "substantial damage" for purposes of this report.

3. "Operator" means any person who causes or authorizes the operation of an aircraft, such as the owner, lessee, or bailee of an aircraft.

4. "Fatal Injury" means any injury that results in death within thirty (30) days of the accident.

5. "Serious Injury" means any injury that (1) requires hospitalization for more than 48 hours, commencing within 7 days from the date the injury was received; (2) results in a fracture of any bone (except simple fracture of fingers, toes, or nose); (3) causes severe hemorrhages, nerve, muscle, or tendon damage; (4) involves injury to any internal organ; or (5) involves second- or third-degree burns, or any burns affecting more than 5 percent of the body surface.

Type of Fire Extinguishing System: If a fire extinguishing system was used to fight an aircraft fire, specify the type(s) of extinguishing system(s) used. Examples include handheld extinguisher, engine fire bottle, cargo/baggage compartment fire suppression system, or airport emergency ground equipment.

Owner/Operator Information: Enter the owner information as shown on the registration certificate. Commercial operators, enter the operator information, including "doing business as" when applicable, as shown on the operator certificate.

Revenue Sightseeing Flight: Indicate whether the accident aircraft was conducting **revenue** sightseeing operations under 14 CFR Part 91 at the time of the accident.

Air Medical Flight: Indicate whether the accident flight was being conducted for the purpose of carrying medical personnel, patient(s), or organs.

Public Aircraft: Federal, state or local government flight operations such as official travel, law-enforcement, low-level observation, aerial application, firefighting, search and rescue, biological or geological resource management, or aeronautical research. Indicate whether the flight was conducted by the armed forces, federal, state, or local government.

Purpose of Flight: 14 CFR Parts 91, 103, 133, 136, and 137: Indicate the type of operation that was being conducted at the time of the occurrence using the following definitions:

AERIAL APPLICATION--Operations using an aircraft to perform aerial application or dispersion of any substance. Examples include agricultural, health, forestry, cloud seeding, firefighting, insect control, etc.

AERIAL OBSERVATION--These flights include aerial mapping/photography, patrol, search and rescue, hunting, highway traffic advisory, ranching, surveillance, oil and mineral exploration, criminal pursuit, fish spotting, etc.

AIR DROP--Aerial operations, other than aerial application, that are intended to release items in flight.

AIR RACE/SHOW--Includes any flight operations conducted as part of an organized air race or public demonstration.

BUSINESS--includes all personal flying without a paid professional crew for reasons associated with furthering a business, including transportation to and from business meetings or work. This does not include corporate/executive operations, air taxi, or commuter operations.

EXECUTIVE/CORPORATE--Company flying with a paid, professional crew.

FERRY--Non-revenue flight under a special flight or "ferry" permit. Refer to 14 CFR 21.197 for details of special flight permit issuance.

FLIGHT TEST--Flight for the purpose of investigating the flight characteristics of an aircraft/aircraft component or evaluating an applicant for a pilot certificate or rating.

INSTRUCTIONAL--Flying while under the supervision of a flight instructor or receiving air carrier training. Personal proficiency flight operations and personal flight reviews, as required by federal air regulations, are excluded.

OTHER WORK USE--Miscellaneous flight operations conducted for compensation or hire such as construction work (not 14 CFR Part 135 operation), parachuting, aerial advertising, towing gliders, etc.

PERSONAL--Flying for personal reasons (excludes business transportation) including pleasure or personal transportation. This also includes practice or proficiency flights performed under flight instructor supervision and not part of an approved flight training program.

POSITIONING--Non-revenue flight conducted for the primary purpose of relocating the aircraft. Examples include moving the aircraft to a maintenance facility or to load passengers or cargo etc.

UNKNOWN--Use only if the primary purpose of flight is not known.

Other Aircraft--Collision: For all accidents involving a collision with another aircraft, including parked aircraft, check "Collision with other aircraft" under Basic Information and complete this section indicating details about the OTHER aircraft involved in the collision.

Airport Information: Complete this section if the accident/incident occurred on approach, landing, takeoff, departure, or within 3 statute miles of an airport. Please refer to the FAA Airport/Facility Directory or other official source for airport information.

Airport Identifier: Provide the official 3 or 4 character airport identifier number.

Runway: Indicate the number of the runway used, including L, R, or C if applicable.

Runway/Landing Surface: Indicate the type of intended runway/landing surface (do not indicate surface conditions). If the surface type was mixed, check all that apply.

Condition of Runway/Landing Surface: Indicate the condition of the intended runway/landing surface. If multiple conditions existed at the time of the accident, check all that apply.

Weather Information at the Accident/Incident Site: Indicate the weather conditions reported at the accident/incident site at the time of occurrence. If no weather reporting was available for the accident/incident site, indicate the reported conditions at the nearest reporting site. Specify the weather reporting site identifier, the observation time, and distance from the accident/incident.

Sky/Lowest Cloud Condition: Indicate the height above ground level of the lowest cloud condition present at the time of the accident/incident and whether coverage was reported as few, scattered, broken or overcast. Also indicate the height above ground level and coverage of the lowest cloud ceiling present at the time of the accident/incident (reported as broken or overcast).

NOTAMs (D and FDC), AIRMETs, SIGMETs, PIREPs: Describe all NOTAMs (distant (D) or Flight Data Center (FDC), if known), AIRMETs, SIGMETs, and PIREPs in effect near the accident/incident.

Flight Crewmember Information: Indicate the category that best describes the capacity served by this flight crewmember at the time of the accident. The designators "Flight Crewmember 1" and "Flight Crewmember 2" do not refer to a specific pilot position or responsibility. If more than one pilot is aboard, they may be entered in any order and their capacity entered as appropriate.

Degree of Injury: See Definitions on the top half of Page 1 of the instructions. Minor injury is not defined. If an injury does not meet the criteria for another injury category, select Minor.

Date of Last Flight Review or Equivalent: Enter the date of the most recent flight review, or equivalent, completed by this pilot. Refer to 14 CFR 61.56 for accepted equivalents.

Type Ratings: List all type ratings on the pilot certificate. If the pilot holds no type ratings indicate "none." If the pilot holds a pilot certificate other than student and was flying an aircraft requiring an endorsement, enter the type and date of any logbook endorsement(s) for that aircraft. See 14 CFR 61 for examples of required endorsements.

Student Endorsements: If the pilot holds a student pilot certificate, enter all solo endorsements and dates on the student pilot certificate.

Flight Time: Complete the flight time matrix. Solo flight time should be included as "Pilot-in-Command (PIC)" and all dual flight instruction given should be included as "Time as Instructor."

Additional Flight Crewmembers: Complete this section if there were more than two required flight crewmembers on the aircraft. This also includes a check airman performing official duties but does not include cabin crew. State the capacity served by each included crewmember at the time of the accident.

Passenger(s)/Other Personnel: Enter identification and injury severity information for all passengers, cabin crew, and other personnel involved in the accident. See Page 1 of the instructions for the official definition of injury levels.

Several questions throughout the form allow for multiple responses; when appropriate, choose all responses that apply.

These instructions only pertain to major issue areas covered by NTSB Form 6120.1 Pilot/Operator Aircraft Accident/Incident Report. For additional definitions of questions and responses, please refer to www.nts.gov.

Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

FOR THE HELICOPTER: THE FUSELAGE WAS CONSUMED BY THE FIRE. AS FAR AS I KNOW, ONLY THE TAIL BOO, THE ENGINE, AND THE FRAME ARE LEFT.

THERE WAS A GREY MINI-VAN: THE HELICOPTER SLID INTO THE MIN-VAN AND WAS BURNED BY THE AIRCRAFT FIRE.
THERE WAS A WHITE VAN: THE DAMAGE CAME FROM THE AIRCRAFT FIRE

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

On May 5, 2017 at about 2:00 pm I had to perform an emergency landing.

I started the day off as normal. Preflight according to Robinson R44 POH and Lycoming OM. Oil was at 7 ½ quarts, fuel was at, if I remember correctly, half in the main and a quarter in the aux tank. Bearings were good, joints were good, Torque strips still lined up, all the test lights lit up, and so on. No discrepancies with pre flight inspection.

When I moved the helicopter out to the city pads, I did ask for a right tank top off because I had several back to back flights and wanted to avoid having to stop for fuel. The additional fuel brought me to about ¾ in the main and ¾ in the aux tank. My first passengers were 150 lbs. and 150 lbs. comfortably within weight and CG limits and I did the flight was without incident. For the second flight, the passengers were 220 lbs. and 130 lbs., still comfortably within weight and CG limits. The seating configuration was me in the front right, the female passenger in the back left seat, and the male passenger in in the back right seat. It was the second flight where I experience the emergency.

The flight was scheduled for our 20 minute City Tour, which is basically a round trip from the airport to over the Santa Barbara Zoo and return. ATIS was reporting 10 mile visibility and a 700 foot ceiling. The winds were minor enough to make it a smooth flight. I completed the startup procedure, Magneto check, the sprag clutch, low rotor RPM warning, gauges, hyd test, and all passed and were acceptable for flight.

I asked the tower for a special VFR request on the way out and on the way in. After lifting off I rechecked the gages when we were flying straight and level. My airspeed and altitude are checked probably ever few of minutes during the flight. Another complete check of the gauges was done when I made the initial request to head back into Signature. All lights were out and the gauges were in the green and normal for this helicopter in Santa Barbara. (Meaning that I've been in Van Nuys on a hot day and the temps would be a little higher, or there have been hotter days in Santa Barbara, temps would be a little higher).

Due to the weather condition, the tower had me hold over the down town area until they could allow me to enter class Charlie air space on a Special VFR request. It felt like I was holding for somewhere between 5 to 10 minutes before we finally got permission to enter class Charlie air space, along the 101 freeway, for landing at the Signature heli-pads, also known as the city pads. While holding, I would avoid flying over the same areas too long to try to reduce noise pollution.

The following events are what I remember taking place, but the sequence and timing of the events happening in parallel or sequence is not clear. All of the events were happening really fast and some of them where simultaneous. Upon returning to the airport, there were two different distinct phases that occurred. The first being a partial loss of power, the second being a total loss of power.

While following the 101 freeway I noticed a partial loss of power. Shortly after that my clutch light came on. Within a few seconds I pulled the clutch circuit breaker. I didn't wait the 10 seconds because something obviously happened, maybe a belt broke. And if it was due to the clutch, I didn't want it to get worse. I believe it was at this point that I started heading for the golf course and made my radio call.

I made a radio call saying, "One Romeo Romeo is going down." The tower came back asking me, "What?" or asking me to repeat my transmission. I'm not sure if the second transmission got out. I remember squeezing the trigger, not sure if it was for long enough, but I believe I repeated myself.

I also remember initially starting to head towards the golf course to make an emergency landing and reevaluated it a couple of times. There might have been some place closer. But again, I can't say exactly when, but I feel like it was before phase two hit. I started heading for the golf course, but remember looking around and seeing a dirt field off to my right and wasn't sure if I was going to make that. I remember considering the freeway and looking for some place closer. I felt that the golf course was my safest choice.

Within moments after the partial loss of power was a complete loss of power. I think my second radio call was during this time. To be honest, I think muscle memory just kicked in. Every fiber in my body want to raise that collective. I'm descending and I don't want to be. I remember a voice in the back of my head telling me to watch my RPMs. To maintain my RPMs. I attempted to maintain my RPMs at about 90%. When we were coming into the parking lot, just before touch down, I remember seeing 75%.

I remember a last minute decision to make the parking lot instead of the grass because we weren't going to make it over the wall. I tried to have it level as we touched down, and I slid into a grey minivan, there was a white van that was parked next to the gray van. When we were stopped there was a little smoke coming from the engine, but no visible flames. The smoke grew heavier and darker as time passed. My left leg did not feel right, though I did not know why. I wanted to help the passengers, but couldn't. The female passenger was awake.

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

MECHANICAL MALFUNCTION/FAILURE (If more space is needed, continue on separate sheet)Was there Mechanical Malfunction/Failure? ☒ Yes ☐ No

(If yes, list the name of the part, manufacturer, part no., serial no., and describe the failure.)

But again, I can't say exactly when, but I feel like it was before phase two hit. I started heading for the golf course, but remember looking around and seeing a dirt field off to my right and wasn't sure if I was going to make that. I remember considering the freeway and looking for some place closer. I felt that the golf course was my safest choice.

Within moments after the partial loss of power was a complete loss of power. I think my second radio call was during this time. To be honest, I think muscle memory just kicked in. Every fiber in my body want to raise that collective. I'm descending and I don't want to be. I remember a voice in the back of my head telling me to watch my RPMs. To maintain my RPMs. I attempted to maintain my RPMs at about 90%. When we were coming into the parking lot, just before touch down, I remember seeing 75%.

I remember a last minute decision to make the parking lot instead of the grass because we weren't going to make it over the wall. I tried to have it level as we touched down, and I slid into a grey minivan, there was a white van that was parked next to the gray van. When we were stopped there was a little smoke coming from the engine, but no visible flames. The smoke grew heavier and darker as time passed.

My left leg did not feel right, though I did not know why. I wanted to help the passengers, but couldn't. The female passenger was awake and saying that her back hurts and calling for help. It appeared that the male passenger was not responding to directions and was not moving based on my peripheral vision as I was looking the female passenger. I think that I told the female passenger to unbuckle herself and get out of the helicopter. I made an attempt to reach unbuckle her seat belt, but couldn't. I was worried about the male passenger as he was not responding. I remember seeing someone standing out the left side of the helicopter and trying to reach for the fire extinguisher to give to him. Again, due to my leg I wasn't able to. Then, there was a very short time that I noticed that the male passenger was now standing directly outside the helicopter. It was on the right side of the helicopter between the white van and the helicopter. I told him to unbuckle the female passenger's seatbelt and get her out. He then proceeded to get her out and assisted the female around behind the white van.

When they were out, I focused on myself. I uncovered my left leg and saw that it was bent at a bad angle. As I straightened my leg out I felt the bones grind on each other and thought, "f*** it's broken." The right side of the helicopter was pretty much wide open due to the impact, so I pulled myself out of the helicopter, though I do not remember exactly how. I do remember I was holding my pants at the knee so that my leg would dangle straight down in alignment. I followed the passengers as we all went around the back side of the white van and that is when people started helping us. A couple of guys helped me to a golf cart. I heard my female passenger complaining about her back. I told the people with her to have her lay down and to keep her back straight.

The first ambulance that showed up, I motioned for them to go to my female passenger first, though, they might have just gone straight to her anyway. Both the male and female passengers were together and being attended to when the second ambulance showed up and checked on me. I was awake and

alert, not in critical condition, I had some golf staff and patrons helping me, and so the Paramedic went over to my passengers. From that point, we all got loaded up and transported to the hospital.

All statements is true and correct to the best of my knowledge and memory.

Michael Barry Ower
