These rules state the authority of the NTSB, define accidents, incidents, injuries, and other terms, and provide procedures for initial and immediate notification of accidents and incidents by aircraft pilots/operators.

#### A. APPLICABILITY

The pilot/operator of an aircraft shall send a report to the office listed above, based on accident/incident location; immediate notification is required by 49 CFR 830.5(a). **The report shall be filed within 10 days after an accident for which notification is required by Section 830.5, or after 7 days if an overdue aircraft is still missing.**

An aircraft accident, as defined in 49 CFR 830.2, is determined as an occurrence that involves a fatality or serious injury, or substantial damage to the aircraft. For occurrences that do not involve a fatality, the determination that the occurrence is an accident can be appealed by writing to the Director, Office of Aviation Safety, NTSB, 490 L'Enfant Plaza, S.W., Washington, D.C. 20594.

#### B. DEFINITIONS

1. "Aircraft Accident" means an occurrence associated with the operation of an aircraft that takes place between the time any person boards the aircraft with the intention of flight and all such persons have disembarked, and in which any person suffers death, or serious injury, or in which the aircraft receives substantial damage. For purposes of this form, the definition of "aircraft accident" includes "unmanned aircraft accident," as defined at 49 CFR 830.2.

2. "Substantial Damage" means damage or failure that adversely affects the structural strength, performance or flight characteristics of the aircraft, and that would normally require major repair or replacement of the affected component. NOTE: Engine failure or damage limited to an engine if only one engine fails or is damaged, bent fairing or cowling, dented skin, small puncture holes in the skin or fabric, ground damage to rotor or propeller blades, and damage to landing gear, wheels, tires, flaps, engine accessories, brakes, or wing tips are not considered "substantial damage" for purposes of this report.

3. "Operator" means any person who causes or authorizes the operation of an aircraft, such as the owner, lessee, or bailee of an aircraft.

4. "Fatal Injury" means any injury that results in death within thirty (30) days of the accident.

5. "Serious Injury" means any injury that (1) requires hospitalization for more than 48 hours, commencing within 7 days from the date the injury was received; (2) results in a fracture of any bone (except simple fracture of fingers, toes, or nose); (3) causes severe hemorrhages, nerve, muscle, or tendon damage; (4) involves injury to any internal organ; or (5) involves second- or third-degree burns, or any burns affecting more than 5 percent of the body surface.

**Type of Fire Extinguishing System:** If a fire extinguishing system was used to fight an aircraft fire, specify the type(s) of extinguishing system(s) used. Examples include handheld extinguisher, engine fire bottle, cargo/baggage compartment fire suppression system, or airport emergency ground equipment.

**Owner/Operator Information:** Enter the owner information as shown on the registration certificate. Commercial operators, enter the operator information, including "doing business as" when applicable, as shown on the operator certificate.

**Revenue Sightseeing Flight:** Indicate whether the accident aircraft was conducting **revenue** sightseeing operations under 14 CFR Part 91 at the time of the accident.

**Air Medical Flight:** Indicate whether the accident flight was being conducted for the purpose of carrying medical personnel, patient(s), or organs.

**Public Aircraft:** Federal, state or local government flight operations such as official travel, law-enforcement, low-level observation, aerial application, firefighting, search and rescue, biological or geological resource management, or aeronautical research. Indicate whether the flight was conducted by the armed forces, federal, state, or local government.

**Purpose of Flight:** 14 CFR Parts 91, 103, 133, 136, and 137: Indicate the type of operation that was being conducted at the time of the occurrence using the following definitions:

**AERIAL APPLICATION**--Operations using an aircraft to perform aerial application or dispersion of any substance. Examples include agricultural, health, forestry, cloud seeding, firefighting, insect control, etc.

**AERIAL OBSERVATION**--These flights include aerial mapping/photography, patrol, search and rescue, hunting, highway traffic advisory, ranching, surveillance, oil and mineral exploration, criminal pursuit, fish spotting, etc.

**AIR DROP**--Aerial operations, other than aerial application, that are intended to release items in flight.

**AIR RACE/SHOW**--Includes any flight operations conducted as part of an organized air race or public demonstration.

**BUSINESS**--includes all personal flying without a paid professional crew for reasons associated with furthering a business, including transportation to and from business meetings or work. This does not include corporate/executive operations, air taxi, or commuter operations.

**EXECUTIVE/CORPORATE**--Company flying with a paid, professional crew.

**FERRY**--Non-revenue flight under a special flight or "ferry" permit. Refer to 14 CFR 21.197 for details of special flight permit issuance.

**FLIGHT TEST**--Flight for the purpose of investigating the flight characteristics of an aircraft/aircraft component or evaluating an applicant for a pilot certificate or rating.

**INSTRUCTIONAL**--Flying while under the supervision of a flight instructor or receiving air carrier training. Personal proficiency flight operations and personal flight reviews, as required by federal air regulations, are excluded.

**OTHER WORK USE**--Miscellaneous flight operations conducted for compensation or hire such as construction work (not 14 CFR Part 135 operation), parachuting, aerial advertising, towing gliders, etc.

**PERSONAL**--Flying for personal reasons (excludes business transportation) including pleasure or personal transportation. This also includes practice or proficiency flights performed under flight instructor supervision and not part of an approved flight training program.

**NOTAMs (D and FDC), AIRMETs, SIGMETs, PIREPs:** Describe all NOTAMs (distant (D) or Flight Data Center (FDC), if known), AIRMETs, SIGMETs, and PIREPs in effect near the accident/incident.

**Flight Crewmember Information:** Indicate the category that best describes the capacity served by this flight crewmember at the time of the accident. The designators "Flight Crewmember 1" and "Flight Crewmember 2" do not refer to a specific pilot position or responsibility. If more than one pilot is aboard, they may be entered in any order and their capacity entered as appropriate.

**Description of Damage to Aircraft and Other Property** *(Use additional sheet if necessary)*

The aircraft struck the ground in approx. a 60 to 70 degree nose down attitude at what I would estimate would be 25 to 30 mph and was damaged accordingly. Prop was turning when contact was made, engine is likely ruined: engine partially detached from the fuselage, fuselage shows evidence of crumpling and severe damage to the passenger cab area. Wings also show evidence of ground contact and are crumpled/bent in several spots. Aircraft is likely a complete loss. No damage to airport or other property was noted. Fuel leaked from the aircraft but never caught fire & was covered with fire retardant by emergency personnel.

**NARRATIVE HISTORY OF FLIGHT** *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

I have previously submitted a statement to the FAA, summarizing my observations of the incident and don't wish to add to it. Below is that statement:

On the early afternoon of May 8th, 2017 my intention was to depart the Coeur d Alene airport (KCOE) in my 1953 Piper PA18A with the purpose of going to the area around Hackney airfield, approx 15 miles to the north, and spending an hour doing practice maneuvers. In preparation, I did a pre-flight inspection of the aircraft at my hangar, which is located on the southeast corner of the airport. I started the engine, tuned the radio to KCOE AWOS for weather information (called winds calm at that time, though the windsock indicated a slight breeze from the south, weather was clear with no ceiling) and proceeded to taxi to Taxiway Alpha. I turned north on the taxiway and proceeded up the taxiway to a runup area just to the right of the threshold from Rwy 24 & 20. I performed my mnemonic checklist (C for controls, fully functional & work in the right direction, I for instrument check & altimeter set, G for gas quantity-approx ¾ full in either 18 gallon wingtank and tank selection – left for takeoff, A for attitude – check doors, windows, seatbelt, trim slightly nose up for climbout, R for runup – mags & carb heat check). All functions were checked, & found satisfactory, aircraft was adjudged ready to go.

Tuning to the CTAF of 122.8, traffic from the south announced at a distance of 5 miles and their intention to land on Rwy 2 (since it was calling calm, either runway would have been usable with the light breeze though I've always gone with the headwind, no matter how slight). I announced departure as I approached the threshold of Rwy 20/24 (visually checking for any traffic at the same time), advising a left turn out from Rwy 2 upon departure (I would fly outside the pattern to the east before turning north) and moved 180 degrees from Taxiway Alpha to the departure end of Rwy 20. As I entered the departure end, I applied more throttle to accelerate the aircraft and reached down to apply 1 notch of flaps to assist a more rapid ground departure for the aircraft. The flap bar is located on the left hand side of the aircraft, right above the floor of the cockpit and as I pulled the bar up to engage the first notch, I released it; the bar failed to engage the first notch and fell back to the floor. By this point, the aircraft was gaining ground speed and I took hold of the flap bar again, gave it a firmer pull up (so as to ensure engaging the first notch) and it did engage, at what I thought was the first notch. With the aircraft accelerating and the flaps engaged, I went to full takeoff power (it will go to 2500 rpm), the aircraft left the ground and all my attention was focused outside of the cockpit, on the climbout, which was initiated in alignment with Rwy 20, at a normal nose up angle.

As the aircraft climbed, it began to veer to the left; I immediately applied the right rudder to correct but the aircraft would not respond & the veer continued until at an altitude somewhere between 50 & 75 feet; recognizing there was some problem & thinking I should abort the takeoff, I retarded the throttle and allowed the aircraft to come down to the ground area between Runway 20 and Taxiway Alpha. By the time the aircraft struck the ground in a nose down position, the nose was oriented approx. 90 degrees to Rwy 20. As the aircraft struck, it spun 180 degrees and came to rest with the nose oriented west. Both wings struck ground in the spinning and were materially damaged, along with the fuselage & engine. I struck what I can only assume is the instrument panel and windshield crossbars as the aircraft impacted, suffering lacerations & bruising on my head & face; however, I did not suffer any unconsciousness and fully alert, I released my seatbelt and exited the aircraft to a safe distance to the south of it to await help.

**RECOMMENDATION (How could this accident/incident have been prevented?)**

## Operator/Owner Safety Recommendation

Any statement I could make at this time would be pure speculation as I'm not completely certain what happened...time from departure to crash was very brief, as it was during the initial stage of takeoff that it occurred. I would like to wait on the investigation to determine if indeed there may have been a failure in the aircraft controls.
