Called RDD [REDACTED] to get WX-ASOS report before flight. Preflighted aircraft at Stockton Metropolitan Airport, measured fuel at 25 gallons, added another 10 gallons of fuel at Atlantic Fuel, obtained ATIS before taxi. Did run up of aircraft - checked both mags, checked carb heat, prop pitch, checked controls, contacted ground controller before taxi, asked for flight following to KRDD, given squawk code, and frequency for Norcal. Departed runway 29 Left at about 11:30 am, right crosswind departure, and climbed to 4500 feet cruise altitude with a ground speed of 130 knots. About 20 miles from KRDD I obtained the ATIS for Redding, I started a slow decent approximately past Red Bluff, at about 2,000 feet msl the engine sputtered and then quit, I checked that fuel was running on both tanks, and checked mags, after that I looked for a suitable place to land the aircraft, I saw high tension lines, hills and gullies, and then spotted a road off to my left and started to head for the road, but did not make the road and ended up in the gully beside the road and aircraft went upside down (inverted). I did not see the power pole prior to impact. I noticed the electrical power pole after exiting the aircraft. I released the belt while hanging upside down, opened the right door, left door was jammed, and exited the aircraft. I suffered minor injuries, cuts and bruises to the right arm and right leg requiring stitches. The sheriff's department and an ambulance responded to the accident incident scene. I was taken by ambulance to the Mercy Hospital in Redding, arrived around 12:45 pm on Friday May 19, 2017 and I was kept in the hospital until Sunday morning at 8 am on May 21, 2017.
