NARRATIVE HISTORY OF FLIGHT (Please type or print in ink)

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State time and point of departure, intended destination, and services obtained.

I departed from the base of the tower and requested right traffic for runway 21. The information given on the ATIS was Juliet at the time. Tower approved my request and cleared me to takeoff at my own risk from the base of the tower remaining north of the Alpha taxiway. I complied with the instructions given from tower and established a 80 mph speed at 1100 feet MSL or 500 feet AGL while on my downwind for runway 21. Just prior to a beam my landing spot for runway 21 tower gave me clearance to land. I performed my pre-landing check and didn't observe any indication lights activated and all my instruments were in the green. Prior to entering my base turn I lowered the collective and reduced the throttle to establish a descent rate to arrive on final for runway 21 at 80 mph and 800 feet MSL or 300 feet AGL. I established a 100 feet descent rate and noticed my engine RPM to be slightly above 2900 RPM's. I reduced my throttle slightly to bring the engine RPM's back to 2900 and keep my descent rate established. I observed my manifold pressure to be approximately 10 inches Hg at the time. At approximately 1000 feet MSL or 400 feet AGL I heard the sound of the engine to be louder than normal. I looked down and observed the engine RPM's to be at approximately 3300 to 3500 RPM. To reduce the engine RPM's and avoid reducing my manifold pressure any more I raised the collective. The engine RPM's remained high and didn't come back to 2900. My descent rate increased and I didn't think I was going to be able to safely make the runway of 21 for Chino airport. I observed an open cow pasture to my right and I picked it as my spot to land. I radioed chino tower and stated, "chino tower copter 97B I am unable to make the runway of 21 and am going to land north of the airport". Shortly after I made a hard landing where the helicopter came to rest. Once the rotors stopped spinning and the aircraft came to a complete rest I shutdown all switches and exited the aircraft. I called the flight school and advised them to let Chino tower know that the helicopter was on the ground and I was okay.

When I started to raise the collective to bring the engine RPM's down I didn't notice if the manifold pressure was increasing or decreasing. I don't think or recall applying throttle inputs while raising the collective. I didn't notice either what my final rate of descent was prior to making the determination that I wasn't going to be able to make the runway of 21 for Chino airport.
