Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

Preflight was in depth-new student, teaching him how to do a thorough preflight per the checklist

Documents/inspections reviewed and compliant

Run up was normal per checklist

Takeoff normal per checklist

Climb out of BFI normal per checklist

Flight over west Seattle to west practice area normal 0.3 Hobbs

Checklist used throughout all phases of flight

Performed straight and level, climbs, descents, turns, constant airspeed climbs and descents, turning climbs and descents, slow flight (all first day of flight maneuvers) southeast of Bremerton Roughly 0.4 Hobbs

Turn back to Boeing for pattern work around 12:25

Report over vashon with current ATIS around 2000' (2:30), waited for tower to call us back to enter airspace, circled over vashon until call back. everything normal. Performed before landing checklist and was told to enter left downwind for assigned runway, and proceeded south of ferry at required altitudes.

Halfway to shore engine starts running rough, thought it was the wind hitting the prop at an odd angle which made the chop noise, start to descend to 1500 per the bootleg arrival

Crossing shoreline south of ferry started running rougher. 1300'. Lost 10RPM-down to about 15-16. Told tower we are losing rpm and engine is shaky.

Tower told us we could proceed straight to runway if needed. About .25-.5 miles into west Seattle, was running rougher. 1200'. Elected to turn toward shore to possibly come around alki due to possibly not being able to make it to BFI (almost 4 miles from current position). Turned NW over Lincoln park and had low oil press. annunciator illuminate. 10-15 seconds later prop came to halt. Told tower engine stopped, Pitching for 68, Ran flow, fuel selector, fuel shutoff valve, mixture, fuel pump, ignition. Tried ignition a few times and prop would not move, Tower asked if we had a place to land. We informed the beach or water. Descending below 700' and decided either the beach or the ocean. Told tower we are going for the beach or ocean. Decided on ocean due to higher tide and lots of concrete shelves towards the shore. Descending through ~200' started with flaps and through 100' started flare for minimum airspeed and then full 30° flaps, while opening doors. Tried touching down at lowest possible airspeed and full aft yoke, instructed student to grab phone to call 911 when we get to shore. Touchdown was not as bad as expected, plane was afloat for a few minutes, when plane came to a halt, we both unbuckled seat belts and swam through already opened doors within 30 seconds of emergency landing. We both exited towards the shore where contractors pushed us out a boat. We were no further than 20' from the shore so we swam to shore in under a minute where we met the painters/contractors who dialed 911 and it seemed Seattle PD/Fire was on the way in minutes after. I escaped with a scrape on my knee and my passenger no injuries at all. We both called family when SPD arrived and called Eric Lynn, chief flight instructor at galvin to let him know what had happened. Coast guard arrived, SPD, SFD, arrived immediately and FAA inspector/Eric arrived within 30 minutes. Was in phone with FAA/NTSB via fire dept phone to give brief overview of what happened. Dept. of ecology also arrived on scene, as well as media.
