NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

I departed Battle Mountain Tanker Base at 10:42am PDT enroute to the Pole Creek fire approximately 20 miles west north west of Wells, NV. T813 was loaded with 700 gallons of retardant, and 270 gallons of jet A. I pulled out of the loading pit at exactly 10:42am PDT, and back taxied runway 30 for a north east departure. Taxi and departure were normal, with no mechanical issues. The Pole Creek fire was 79nm to the north east of KBAM and ETE was approximately 30min. I made a standard traffic pattern calls at KBAM and after departure contacted Elko Dispatch Center on Elko Local and gave them my vitals. (T813, just off KBAM enroute to Pole Creek, ETE 30 min, 3Hours + 30 fuel on board, 1 Soul onboard and please confirm AFF) The flight to the fire was normal, and upon arrival to the Fire Traffic Area (FTA) I made the standard call for clearance into the FTA. (Pole Creek air attack, T813, 12 to the southwest, and air attack (ATGS) cleared me into the FTA with a current altimeter setting and assigned altitude, 7500 msl) I proceeded to the fire and made a drop to the north side of a dozer line to support ground firefighters. The drop was completely normal and air attack asked for a load and return out of Wells, NV Tanker Base. I then turned south east towards Wells, NV and tuned CTAF 122.8 to listen for traffic. Area traffic was using runway 26 as the active and I began to set the aircraft up for a standard left traffic pattern from the west north west. I entered left traffic pattern for runway 26 and made standard calls for downwind, base, and final for runway 26. I noted the midfield windsock was indicating a north wind of 5-10mph. I continued my approach to runway 26 and made a normal wheel landing at 80-85 mph (Air Tractor aircraft are indicated in MPH not Knots). The main landing gear touched down and everything was completely normal. The aircraft was on centerline and correct speed, with full flaps. The aircraft was tracking normal and roll out, up to that point was normal. As airspeed bled off and the tail wheel began to lower and at that point I lost all rudder and aileron authority. The aircraft began a hard turn to the right at which point I realized that the aircraft was going to depart the runway. As the aircraft reached the soft asphalt gravel on the north side of the runway the aircraft accelerated its turn to the right and it became perpendicular to travel. As a last effort to keep the plane upright I unlocked the tailwheel. The aircraft continued the right turn in the soft asphalt and the left main gear dug into the ground and departed the aircraft underneath the engine cowling, striking the propeller. The left wing then struck the ground and the aircraft came to rest 180 degrees to runway 26 on the north side of the runway. I proceeded with a normal engine shut down and turn the fuel off. I exited the aircraft through the left door over the left wing.
