NARRATIVE HISTORY OF FLIGHT (Please type or print in ink)

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

Owner told me helicopter back from two year lease back out of state. I told owner I would fly helicopter. Preflighted helicopter and looked over logs. Helicopter had about 8 gallons of fuel total. Hovered ship to fuel pumps and put 20 gallons in main tank. I flew one pattern around airport and landed at pumps.

While filling ship with fuel my friend / aircraft mechanic asked me if he could go with me during flight. I said sure. We departed KAUN and initially flew over town of Meadow Vista to look at soccer fields. We then turned to southwest and flew down north fork of river to Folsom Lake to sightsee lake. Decided while near lake to land at his customers property to pick up a check.

Approached the landing site from north. No wind at all. Initially hovered at edge of the landing zone / pool deck area. This was an I.G.E. hover. Decided to move in a hover to another position putting ship in an O.G.E. hover. Ship settled and rotor rpm decayed until horn at 970 rpm. Rolled on full throttle to recover. Ship continued to settle with decaying rotor rpm. I realized I had no escape due to surrounding trees. Allowed ship to settle until landing on solar panel array. Throttle still at wide open and collective up to keep ship light on panels. →

At this point I told my passenger to depart helicopter to the front, which he quickly did, I now was able to milk down the collective and recover my rpm to 102%. I thought I could now climb up and depart the confined area I had settled into. I hovered straight up to clear the trees and the rpm decay started again. I applied W.O.T and gently moved forward to a sloped grassy area to the east of the solar panel array. The rotor rpm continued to decay despite my attempts to stop it. The ship settled to the sloped grassy area and touched the left rear skid. The ship kicked up slightly and then came down on the left skid digging into the grass and the dynamically rolled on its left side.
