☐ On-Ground ☐ Unknown

Aircraft Explosion

- ☒ None ☐ Both Ground and In-Flight
☐ In-Flight ☐ Explosion at Unknown Time
☐ On-Ground ☐ Unknown

Description of Damage to Aircraft and Other Property (Use additional sheet if necessary)

Airplane was substantially damaged. Prop strike. Tailwheel severed, struts & flying wires bent, wings bent & broken.

No damage to other property.

NARRATIVE HISTORY OF FLIGHT (Please type or print in ink)

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

The flight in question was the fourth of the day at Santa Paula Airport (KSZP). Each flight was a (non-revenue earning) sightseeing flight over the local area. The flight commenced at 200pm and a normal takeoff run on Runway 22 saw us airborne before the airport office building at midfield. Once airborne, I noticed the climb rate was lower than normal, and the engine seemed to be running rough. Within a few seconds, the altimeter indicated our altitude to be 500' MSL (250' AGL), and showed we were no longer climbing. With the engine still running, I initiated a ~~left~~ left turn with a view to returning to the takeoff runway. With the turn underway it quickly became apparent that an off-airport forced landing would be necessary, and I focused my attention on landing as slowly and gently as possible. Upon landing in a three-point attitude, the thick brush and bamboo arrested the aircraft's forward motion and the plane flipped onto its back. After shutting off fuel and all switches, I carefully released my seatbelt and exited the aircraft, then assisted the front passenger in doing the same. I then called 911 and awaited the arrival of emergency services.

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

With no indication at this stage why there was a partial engine failure, it is difficult to know how this accident could have been prevented. Had I opted to land straight ahead (instead of making a left turn), one could argue I would have landed into the wind, instead of with a tailwind. That said, the terrain is just as tough in the opposite direction, so I personally feel the outcome would have been no different. Most likely, brush would still have caused the airplane to flip over.

MECHANICAL MALFUNCTION/FAILURE (If more space is needed, continue on separate sheet)Was there Mechanical Malfunction/Failure? ☒ Yes ☐ No

(If yes, list the name of the part, manufacturer, part no., serial no., and describe the failure.)

ENGINE FAILED TO PRODUCE FULL POWER IN INITIAL CLIMB.
INSUFFICIENT POWER TO MAINTAIN ALTITUDE ONCE 500' MSL
(250' AGL) REACHED.

CONTINENTAL W670-6A, SERIAL # 19184
