Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

Propeller damage, wing strut damaged, broken windows, wing damage, tail and rudder damage, aft fuselage damage, upper fuselage damage, possible engine mount / firewall damage, nose strut damage.

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

On October 2nd 2017 at approximately 12:30 PST I was flying from KWMC (Winnemucca NV) to KSGU (St. George). I was flying with 3 other aircraft down to Prescott AZ for the Embrie Riddle Alumni Event. I was about 1000' AGL when my engine had a drop in RPM and sounded like sputtering. I immediately checked my fuel selector valve and it was in the both position. I then checked my ignition switch and it was also in the correct position. With the loss of RPM I made a radio call to my fellow pilots and made the decision to make a precautionary landing on the dry lake bed directly below. I then executed a 180 degree turn to turn into the wind, lowered my flaps two notches and proceeded on my approach. I kept power in and started to execute a soft field landing. Upon touch down of the main wheels the aircraft started to decelerate rather quickly and the nose of the aircraft was pulled to the ground despite my elevator efforts to keep the nose up. The nose of the aircraft then dug into the soft dirt and then the aircraft flipped over on its back. I was still fastened in my seat belt and made a radio call out saying that I was OK. I did not wait for confirmation of the radio call and proceeded to turn off the aircraft master switch and the ignition key. I also pulled the fuel shut off valve. I then braced myself for releasing my seat belt. I did so with out injury and then tried to open the door, it did not open so I decided to push out the side window and climb out it. Once out I waved to my fellow pilots to let them know I was OK. The other 172SP continued to circle while the X-Cub and FX Carbon Cub found a suitable place to land and retrieve myself and my gear.

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

I could have been flying higher which may have give me more room to make it to the edge of the lake bed. I could have not flown altogether.
