Narrative History of flight for crash of Nanchang CJ-6 N8NW on 10-9-2017

My Flight plan was to depart from North Las Vegas airport (KVG T) and fly to Goodyear Airport (KGYR).

I called weather services [REDACTED] at approximately 1245 on Monday afternoon to get a weather briefing. Winds were expected to be a little gusty. My wife and I arrived at the airport at approximately 1400 and requested the fuel be topped off. The FBO topped off the tanks and it was 9.1 gallons. (Note: I moved the plane from Henderson Executive airport on Saturday Oct 7th, due to a large business plane expo and they wanted \$1000 fee to park. I topped off the tanks in Henderson after we landed there on Friday October 6th. They put in 32.9 Gallons of 100LL at that time). We paid the FBO for the fuel and parking fee and then I conducted my pre-Flight inspection. We departed North Las Vegas Airport approximately 1450. Winds were a little gusty (approximately 15 to 18 knots from my recollection). We took off and turned West to stay under the Bravo Airspace. We climbed to 3500 ft MSL. I headed West then turned South then back to the South East when we cleared the Bravo Airspace. I climbed to my cruising altitude of 9500 ft MSL. I had the course plotted on Fore Flight in my I-Pad. I adjusted the cruise to approximately 1950 RPM when I achieved the cruise altitude and leaned the mixture. The indicated airspeed was 120 knots. The ground speed was varying between 150 to 160 knots according to my I-pad. The flight was uneventful and the weather was clear. I began my descent when I was approximately 30 miles from Goodyear airport the engine started varying in pitch and RPM. So I checked my fuel quantity and it was 60 litres on the left tank and 60 on the right tank. I enriched the mixture and it did not help. The engine seemed to smooth out for a minute then began to vary in pitch again. I turned on the Auxiliary Fuel pump and the pressure was good at 40. The plane just began to slow down and would not make thrust. I eased full forward with the prop and throttle and the RPM seemed to be good at 2550 but the engine would not make thrust. The plane slowed to 80 knots and falling fast so I decided to make an emergency landing. We were at approximately 5000 ft MSL. I lowered the nose to increase airspeed. I Told my wife to tighten her harness and open her canopy and that I was going to have to set us down. I picked out a construction site to the East so I banked left and glided towards the construction site. I opened my canopy too. It appeared to be cleared and somewhat flat from my view at the time and I could see workers present so we would have help right away. I did not lower the landing gear per the emergency procedure. There was a temporary wire fence at the edge of the construction site we were descending very quickly and the engine was still running. When I saw we were not going to clear the fence I raised the nose slightly and I think the prop clipped the top of the fence. When we touched down the left wing hit something. Not sure if it was a ditch or a plant and it spun us violently to the left. I was knocked unconscious for a few seconds. When I regained consciousness I saw the construction workers running towards the plane. I immediately unbuckled my harness I immediately helped my wife out of the plane and escorted her to a safe distance. There was fuel and oil leaking from the aircraft. I informed the construction workers to stay back as a fire could start from the leaking fuel. I immediately returned to the airplane and shut off all the switches to be sure a spark would not start a fire. When I got back to my wife I was asking if she was ok when I realized I could not breathe. I laid down on the ground and the medics showed up and started working on me and my wife. We were flown to Abrizzo West Hospital trauma center. They ran many tests and we were released a few hours later.
