The following is a statement of fact based upon my recollection of the following accident while PIC of N181TJ.

On October 15th 2017 at approximately 1015 MDT while acting as PIC of my 2009 Turbine Cubs of Wyoming PA18, I experienced an accident while performing a precautionary landing in Skull Valley, UT approximately 6 miles SE of Delle, UT.

After a thorough pre-flight inspection, including checking for water in the fuel system, I conducted a daytime VFR flight with no ATC services. I had just completed a low altitude pass to observe an object on the ground and was applying power to initiate a climb. The engine stumbled slightly and seemed to hesitate with the application of power. I applied carburetor heat after observing the OAT to be 41 degrees F and thinking maybe carburetor ice. I applied power further to full power and the engine again seemed to hesitate. I decided to take advantage of my position over a large hardpan and land to investigate my perceived problem.

I reduced throttle and deployed flaps and conducted a tail low wheel landing. As I touched down and weight was transferred to the wheels, the tail raised and the aircraft flipped over upside down, where it came to rest. After ensuring that my passenger was ok and that neither of us had any injuries, we exited the airplane. I immediately noted that both main wheel brakes were engaged. I believe that the brakes were engaged when we touched down. To the best of my knowledge I did not apply pressure to the heel brake pedals during landing, there was no reason to, as there was a large smooth area in front of me.

I recently had experienced an incident with this aircraft 90 days prior where I lost the propeller inflight. So when I thought that the engine may have had an issue, I was determined to investigate this while on the ground and not in the air. This decision is what prompted a precautionary landing.

I reserve the right to change this statement as facts or information become available.
