Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

Nose gear collapsed on landing on soft field.

Additional damage to firewall occurred during the A/C recovery to preserve it to help the investigation.

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

Local flight originated at EMT around noon. The preflight inspection and the engine runup were conducted according to POH.

The destination airport was F70. Direct flight. About 20 miles from F70 @ 5500 ft MSL the engine lost power. RPM dropped quickly, but smoothly. No rough running was noted before sudden RPM drop. No loud noises indicating a mechanical failure were heard.

The pilot directed the airplane to previously spotted field immediately, turning about 90 degrees to the left. After establishing the best glide airspeed and assuring the field is within the glide distance, the emergency engine checks were performed, followed by a mayday call at 121.5 MHz.

Emergency landing was made with on the field with flaps fully extended trying to avoid the power lines. Upon landing, the nose gear collapsed, causing the airplane to flip over after it stopped, causing the damage to the vertical fin.

The pilot and the passenger unbuckled and exited the aircraft.

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

Although the weather conditions at the time of the accident did not look to be conducive to the curb ice, if the cause of the power loss to be determined as the curb ice, a simple "idiot light" indicator would be very helpful for each airplane equipped with TCM continental O-200 engine. Such an indicator can be built cheaply and, assuming a simplified FAA approval, similar to the approach FAA took regarding the shoulder belts, which quite possibly prevented the injuries during this particular off field landing, can prevent many similar incidents in the future.

MECHANICAL MALFUNCTION/FAILURE (If more space is needed, continue on separate sheet)Was there Mechanical Malfunction/Failure? ☒ Yes ☐ No

(If yes, list the name of the part, manufacturer, part no., serial no., and describe the failure.)
