Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

Main gear suspension failure destroyed wheel mount. Right wing tip deflected upwards 2" outboard of wing strut. 1/8" damage to the composite propeller. No apparent damage to control surfaces, leading edge slats or flaps.

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

While flying on the North Shore of Oahu at about 8:30am, I attempted to land at the Dillingham airport with some difficulty in the suspension system of the JA30 (N413Z). The airplane ground looped. I went out of the aircraft and did a visual inspection. I could find no damage that would warrant an incident report, but I was concerned.

I flew the aircraft around the West end of Oahu from Dillingham. I talked to the tower at PHJR, and announced my position for landing. The tower responded with the winds and gave me an assignment of the runway 110. As I recall, the winds were approximately 160 at 04 knots. We executed a normal approach, and reduced our speed to touchdown of about 30mph, more or less. Upon touchdown, the aircraft veered sharply, and the suspension strut failed. The aircraft ended up with the undercarriage substantially damaged. The right wing was damaged as well.

I was in immediate contact with the tower, and assured them that no one was hurt. I then shut down all equipment in the aircraft – including fuel and electrical. I exited the aircraft. I still didn't understand what had happened. Walking around the aircraft, I found the right suspension strut had failed, and departed from the aircraft. It was lying about where the touchdown took place. When the emergency vehicles came, we received authority to defuel the right wing – which we did. Security questioned if there were any injuries, and there wasn't even a bump or bruise. The aircraft has 4point seatbelt harnesses. As I walked around the airplane, I observed that the engine had a sudden stop and that the propeller had impacted the surface of the runway. There was contact very shortly after that, with the NTSB in Phoenix, Arizona. We received authority by all present to move the aircraft off the runway. We loaded it on a trailer by hand, and transported it to the nearby hangar, which is where the FAA examined the wreckage.

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

Possible recall of the ACME strut that I have learned has had previous failures. Factory has upgraded and strengthened new struts that we will put on airplane prior to next flight.

MECHANICAL MALFUNCTION/FAILURE (If more space is needed, continue on separate sheet)

Was there Mechanical Malfunction/Failure? ☒ Yes ☐ No
(If yes, list the name of the part, manufacturer, part no., serial no., and describe the failure.)

***ACME SUSPENSION STRUT 24614**

Please refer to the attached photos for strut failure/explosion of the nitro gas upon touchdown – which caused loss of control in the final phase of flight.
