NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

I received a phone call from Mike, Director of Golf at 12:30pm that the passengers were done golfing and ready to be picked up. I asked what the winds were like at the golf course and he said 4-5kts. On my flight out, crossing over the mountains at Tahquitz (6,500ft MSL) I experienced strong winds. Once I approached the Borrego landing site (approximately 520ft MSL, 71 °F), I landed into the wind and performed a complete shutdown. I then loaded the passengers and their gear after re-briefing them on doors and seatbelt use, as well as verifying all seatbelts were properly fastened. Before taking off I noted the wind direction, and the fact it had increased significantly. I took off into the wind towards the Salton Sea and due to shifting/increasing winds I maintained 70KIAS as a precautionary that is recommended at the Robinson Safety Course as well as POH 4-9 Normal Procedures. I then turned towards Fonts Point at approximately 900ft AGL in a slow steady climb for 2,500ft AGL. My planned route on return was to head to Thermal (KTRM) instead of returning to Tahquitz pass where I had experienced the strong winds previously thus adding extra safety margin. With this route we would be able to take on additional fuel prior to continuing to Palm Springs (KPSP).

Approximately ten minutes into the flight I heard a light thump accompanied by a small yaw of the helicopter left and right. This thump was initially thought to be wind induced. Shortly thereafter I encountered a clutch light. As I counted down for the 10 second clutch light procedure I was interrupted by a low RPM light and horn after 5 seconds. To maintain RPM I fully lowered the collective and applied aft cyclic to load the rotors to help sustain a safe rotor RPM and my 70 KIAS. At this point I rolled off the throttle and continued with an autorotation. The low RPM horn and light continued however the clutch light ceased. Eventually the rotor RPM was regained to 100% and the horn and light went off. I immediately picked a landing site free of wires, obstructions, large rocks, and ravines. I maneuvered the aircraft to position it so as to be landing into the wind at this site. I informed my passengers we would be making a forced landing and that they should brace. At approximately 50ft AGL when descending into the valley, the wind switched from a headwind to a tailwind and the low RPM light and horn came on again. Due to the low altitude this occurred, I did not have margin to maneuver back into the wind. I rolled on the throttle and applied a cyclic flare to decrease rate of descent and airspeed. At this point I realized that although my landing site was free of rocks and ravines, the sand was uneven. At approximately 10ft AGL I began to level the ship. As the aircraft settled through 5ft AGL the aircraft weathervaned, bringing the nose to the left. I raised full collective just prior to touchdown and we contacted the sand with both skids. Due to the uneven terrain coupled with the last minute weathervane the aircraft immediately rolled onto its right hand side. Once the aircraft had settled, I shut the remaining electrical power off and assisted the passengers to exit.

Immediately after helping the passengers safely egress and rendering aid I called 911, followed by the FAA and then the company to inform of the mishap. I then returned to the aircraft, and switched on the battery to obtain coordinates from the Garmin GPS on-board to notify first responders of our exact location. I confirmed the ELT was transmitting its signal, and entered the cabin to gather additional first aid supplies. After the ten minutes it took to perform these actions, I shut the battery back off. Once rescue personnel arrived on station it was immediately ascertained that all occupants were only sustaining minor injuries. Only one passenger later required seven stitches. I informed all occupants that they should be seen further by medical professionals to prevent any injuries going unnoticed. They agreed, and thanked me for landing them safely on the ground. While they were transported to medical facilities, I stayed behind to continue communication with the proper authorities such as the FAA and NTSB.
