Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

Propeller damage. Engine sudden stop, left and right wing skin pierced by fence posts, wing tips dented, front windshield broken.

Security Fence at Pratt and Whitney pulled from posts and bent

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

I contacted Nor'east aviation at KEWB at around 9am Saturday morning to request fuel to the tabs for my flight later in the morning. I arrived at KEWB at about 10am and performed a full pre-flight inspection using the PA-28-140 Checklist like I always do. Doug (passenger) arrived to the airport after I completed the pre-flight so we boarded 1782J to depart to Hartford-Brainard KHFD. As part of the pre-flight I continued the checklist to perform a run-up at New Bedford before departing.

I headed west at 4,500ft and 30 minutes after departure I switched fuel tanks. I landed at KHFD at around 11:30am

We spent about 30 minutes on the ground eating lunch. Once we finished eating lunch I performed a pre-flight, verifying fuel and condition of the airplane. I also performed a full Run-up prior to departure via the checklist. We departed via Runway 2 with an eastbound turn approved by the tower. I climbed to 800ft before making a right turn to the east over the Highway. Shortly after going wings level the engine began to lose power rapidly. I stopped the climb and began looking for options to land. I ruled out a 180 turn back to the airport as we were too low. The disused runway at Pratt and Whitney was plenty long enough so I resolved to land there. I then performed troubleshooting to get the engine back to life. I verified Mixture full rich, carb heat off and I switched tanks. Engine didn't respond so I cut power and performed a forward slip to lose enough speed and altitude to make a straight in approach to the disused runway heading Southwest. I ended up only being able to use the last few hundred feet to slow down and as a result struck the fence. I verified my passenger was ok and not hurt and helped him exit the airplane before pulling the mixture out and turned off the mags. I then exited the plane and we asked a local vehicle driving by to contact the police.

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

I believe this was a mechanical failure, there was no way for the Operator to prevent this issue

MECHANICAL MALFUNCTION/FAILURE (If more space is needed, continue on separate sheet)Was there Mechanical Malfunction/Failure? ☒ Yes ☐ No

(If yes, list the name of the part, manufacturer, part no., serial no., and describe the failure.)

I believe the recently replaced fuel selector valve failed and starved the engine of fuel.
