Description of Damage to Aircraft and Other Property <i>(Use additional sheet if necessary)</i> Left Wing, Left fuel cell, Both main landing gears, front landing gear, prop, fire wall Also, avionics and the interior was damaged from the foam		
NARRATIVE HISTORY OF FLIGHT <i>(Please type or print in ink)</i> Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible. Prior to leaving for the airport: Friday at 8:10 am Contacted flight briefing for a full briefing. Friday starting at 10:00am, we departed around 11:00am Arrived at KISP, uncovered the plane, removed the cowling cover and pitot tube cover, wind gust lock stored them and then removed all tie down straps (three) did a visual inspection from in front and inspected the ground under the engine and wings for any sign of oil or fuel leaks also did that on the wheel pants for fuel stains. I then performed a thorough pre-light inspection including reviewing the following: Checked all four fuel gauges Went outside to visually check landing light, anti-collision lights and nav lights Went back in and turned off the lights and master and proceeded to do the outside walk around Checked for any external damage on each wing, tail Inspected all control surfaces Visually checked fuel in each fuel tank, drained each tank sump as well as fuel sump drain under the fuselage. All were free of water and sediment. Visually checked each fuel tank vent Checked each main tire for proper inflation wear, checked to make sure each wheel pant was secure. Visually checked brakes and brake fluid lines to each. Checked pitot head hole and the stall tab. Checked prop and spinner for any issues, checked alternator belt Confirmed that the cowling cover was secure and the air inlets were clear Checked nose tire, wheel strut and wheel pant Checked oil lever, saw that there was 9.5 quarts of oil and added 1 quart Checked for any issues from the prior use of the plane I then loaded in one piece of luggage in the front baggage area and locked it and Placed a second piece of luggage in the rear storage area, secured that in place. I then escorted my two passengers out to the plane and visually watched them seat belt themselves in the rear seats of the plane and then secured the back door. (They were already briefed by me). I then followed the normal steps to start the engine, turned on the mixture full rich, turn on the master and fuel pump, advance the throttle, yell clear prop and engage the starter. The engine started normally. I turned off the fuel pump and leaned the mixture, checked oil pressure, oil temp, amp gauge. Turned on and set all avionics and radios and GPS. After getting ATIS information I contacted clearance, and then ground and was cleared to the area to do my run up. The run-up results were completely normal. The run up included the following: Running the engine at 2000 RPM, checking the drop in RPM by each magneto, vacuum gauge, oil pressure and temperature, exercising the prop (3 times) and left it in the appropriate take off position, checked alternate air, circuit breakers, annunciator panel lights. Checked all controls, set all instruments, confirmed transponder, confirmed radio settings, confirmed everyone was seat belted in and the anti collision and landing light was on and confirmed fuel tank selector and closed and locked the door.
