AIRCRAFT MODEL: CESSNA 402C

AIRCRAFT REGISTRATION: N322HA S/N 0418

OPERATOR: AIR FLIGHT CHARTERS (AFWA297B) PILOT IN COMMAND AUSTIN BANDEMER

DATE OF INCIDENT: JUNE 14,2018

DESCRIPTION OF FAILURE: IN FLIGHT (PBI TO MYAF) AIRCRAFT LOST ALL ELECTRICAL POWER. AFTER ALL ELCTRICAL POWER FAILURE EMERGENCY PROCEDURES WERE ATTEMPTED BY PILOT IN COMMAND. PILOT IN COMMAND THEN ATTEMPTED EXTENSION OF THE LANDING GEAR BY EMERGENCY BLOW DOWN, SYSTEM FAILED DUE TO T-HANDLE SEPARATING FROM CABLE. BY THIS FAILURE THE EMEGENCY BLOW DOWN WAS NOT ABLE TO DISCAHARGE TO BLOW DOWN LANDING GEAR.

AFTER READING PILOT REPORT AND INSPECTED AIRCRAFT AFTER EMERGENCY LANDING (BELLY LANDING), FOUND LEFT STARTER MOTOR WITH EXTERNAL OVERHEATING DAMAGE. INSPECTED STARTER MOTOR AND FOUND ELETRICAL SHORT INSIDE THE UNIT. REMOVED AND INSPECTED STARTER RELAY FOUND MAGNETIC RELAY STAYED IN THE CLOSED POSITION AND PRESENTED INTERNAL SIGNS OF SHORTING OUT. IN CLOSED POSITION THE STARTER PUTS A LARGE LOAD ON THE AIRCRAFT. THIS AIRCRAFT CHARGING SYSTEM IS NOT CAPABLE OF MAINTAINING A CHARGE WITH A CONSTANT LOAD DRAW. THIS DRAW CAUSED THE AIRCRAFT TO LOSE ALL ELECTRICAL POWER IN FLIGHT.

RE: Client Statement of Incident Involving N322HA
Our Client: Mr. Austin Bandemer

FAA/NTSB/ASI Burton:

On June 14th, 2018, my client was flying from West Palm Beach International en route to Fresh Creek, Bahamas in N322HA. Mr. Bandemer departed Palm Beach at 8:30am. Approximately, 20 minutes into the flight he observed a low volt annunciator. Ten seconds after the annunciator light illuminated, the aircraft had a complete electrical failure. During this time, Mr. Bandemer was flying the aircraft in the vicinity of Bimini, Island. Mr. Bandemer appropriately dealt with the electrical failure by accomplishing the procedures for dealing with an electrical system emergency procedures alternator failure (dual).

Upon completing the checklist procedures, Mr. Bandemer still did not receive any power in either alternator or battery. Accordingly, Mr. Bandemer knew the landing gear would not extend because the gear is electrically actuated. Still circling around Bimini, Mr. Bandemer reviewed the checklist for situations where the landing gear will not extend hydraulically. While reviewing this checklist, he brought a passenger from the back of the plane to assist with reading the checklist. After completing the checklist and accomplishing the procedures, the landing gear still seemed to be in the up and locked position.

Mr. Bandemer then contacted another pilot and the mechanic at the 135 Air Carrier via cell phone and had them contact Bimini, so he could perform a low pass in order to determine if the gear was extended. After the low pass, the gear was still retracted. Once again, Mr. Bandemer performed the landing gear will not extend hydraulically checklist.

At this point Mr. Bandemer had to attempt to lower the gear via of the T handle. Mr. Bandemer knew the T handle was difficult to pull, nonetheless, he tried pulling it as hard as he could. Instead of actuating the gear to, the T handle separated from its housing (i.e., it broke off). Consequently, Mr. Bandemer knew the gear still was not extended, but he decided to do one lower pass over Bimini to see if the gear was extended. Unfortunately, it was not.

After the second low pass and knowing the T handle was broken, Mr. Bandemer knew his only option was to fly back to Fort Lauderdale (FLL) and try to get the electrical system back online. As he was flying back, he briefed the passengers on the circumstances that had arisen. When Mr. Bandemer returned to Fort Lauderdale (FLL) he decided to circle for another hour and thirty minutes since the aircraft had extra fuel to burn off and was attempting to troubleshoot the complete electrical failure. Again Mr. Bandemer performed the electrical system emergency procedures alternator failure (dual). While performing this procedure, Mr. Bandemer noticed a slight output in the right alternator of 5 Amps.

Not knowing the exact amount of fuel at this point in the flight, he was subjectively conservative concerning the amount of fuel burned. At around 11:45am he made the decision to go in and land because amount of power out of the right alternator was insufficient. At this point, he again briefed the passengers that he would do one low pass then come around and land with the gear retracted. He also briefed, with the passenger sitting next to him, the emergency landing procedures forced landing (complete power loss) checklist they would be using to perform the belly-up landing as since he was going to be shutting down both engines. After the low pass, he came around and performed the emergency landing procedures forced landing (complete power loss) checklist and landed the plane safely on runway 10R. Once the plane came to a complete stop he got out of the airplane and escorted his passengers immediately away from the plane.
