NARRATIVE HISTORY OF FLIGHT (Please type or print in ink)

08/08/2018 | Time 1828 PST

N255 Cessna Sky Master 337 | PT91 Flight | KLWS Runway 30 Class D Tower in Operation

Pilot: Jim Page | ATGS: Dave Robinson

Weather: Clear, Light & Variable Haze 97°F | Flight Time for the day: 6.4

rain and include
ntended

We left the Rattle Snake Fire TFR South of Riggins, ID to return to Lewiston, ID KLWS. I had Dave Robinson as my only passenger aboard. We had flown for approximately 4 hours on the fire; the mission was a VFR PT: 91 flight used for Air Attack. We flew direct back to our original departure point at Lewiston, ID. We listened to ATIS and received clearance from tower to set up for a three mile final for runway 30. At 5.5 miles off the end of runway 30 and in level flight I selected flaps 1st notch. At 5 miles and below 140 I selected gear down. The red gear unsafe light remained illuminated as did the white gear motor light. We could hear and feel the aircraft slow as the gear doors were deployed; however neither the green light nor the gear appeared. We checked the lightbulbs and determined they were working properly. Because of the time limit on the gear motor, I decided to pull the lower right gear motor circuit breaker in order to not cause harm to the continuously operating gear motor. I advised ATC that N255 had a possible gear malfunction and requested a low approach for runway 30. Tower confirmed that indeed the gear doors were open however all gear was still showing up. I advised tower I would like to trouble shoot the problem to the south east of the field and run the appropriate checklist for manual gear extension. South East of the field was uncontested and avoided airline departures. I ran the gear extension checklist and did not have any luck. I then reset the gear motor circuit breaker and cycled the gear lever up, which provided no change; the gear doors remained open and gear remained up.

I then decided to use some CRM and have my ATGS monitor ATC and scan for traffic. I called Dave Parker, Owner of Northern Air, Inc., Mechanic A&P, IA and DO. He is very knowledgeable about Cessna 337 Skymaster's systems. Over the span of 1 hour I called him on my cellphone 3 times, and each call was about 8-10 minutes in duration. I would take notes on what Dave was telling me, then call him back after I did what he suggested. Throughout this process I would check in with ATC and continued to fly the aircraft and monitor systems. We checked the hydraulic reservoir dip stick located under the center pedestal and saw no oil measurement on the stick. We tried pouring fluids available to us (engine oil/water) into the hydraulic reservoir and then pumping the gear handle quickly with no luck. After we had exhausted all possibilities of getting the gear down we did another low pass with the gear lever down and were informed by tower again that the gear was still up.

After 5.5 hours airborne and running low on fuel I declared an emergency and squawked 7700. I also requested crash and rescue upon landing. I decided to feather and shut down the front engine, and bumped the starter on the front engine to position the prop horizontal to avoid a prop strike. We secured the engine and ran the appropriate checklist, double checked that our belongings were fastened down securely, and locked the top door hatch open for egress. We made a normal landing and slowed as much as possible right before touchdown. Once on Runway 30 and still sliding I cut off all fuel and turned off all electrical. When N255 slid to a stop approximately 1300' down the runway we walked away. No fuel was spilled, nor were there any fires.

In summary I believe that as PIC that I did everything to the best of my knowledge and training to get the gear down. I did not rush the problem. I also had great help from ATC, my passenger, and my mechanic; it was a team effort.

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

After Discussing Failure with a company in Canada that has 18 skymasters
They have had this failure 3 times since 1980.

They have installed main gear Door removal STC Supplied by
RTAEROSPACE to remove the problem cylinders and "parachute" style
MAIN GEAR DOORS, STC Kit #3800⁰⁰
Kit is ordered
