Description of Damage to Aircraft and Other Property <i>(Use additional sheet if necessary)</i> Destroyed lower cowling, various dents and water damage, Bent Firewall					
Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.					

On 08/14/2018 at about 9:30am I took off from KMAN for a pleasure flight with an old friend. Prior to take off I did a normal preflight and checked for fuel, I estimated about 8 gallons in the left tank and about 9 in the right, as I had put 5 gallons in each tank after the last flight. We flew west to Marsing, then down river to Homedale, then turned south and headed to Skypark (ID40). We climbed to 1500 agl on the way and was looking for wild horses on the way by the hills, I looked at the fuel gauges at this point, and determined I was ok on fuel. Upon entering ID40s traffic pattern, about 3/4 mile past the south end of the runway we turned base and then final for a gliding gradual decent to the 12 end of the runway, at that time I pulled the carb heat and then the throttle. We glided down to about the middle of the runway and about 60' AGL, for a planned go around/fly by, to see if a friend was home, as his residence is on the east side of the 12 end of runway. At that time I pushed in the throttle and experienced engine out, I immediately looked at the left tank again, and it was bouncing between 1/4 and Empty, then I looked to the right tank and it indicated between 1/2 and 1/4, so I turned the fuel selector to the right tank. At this time I was out of runway and about 60 mph indicated, with trees and climbing terrain ahead, I turned slightly to the right over the river, knowing it was lower elevation and would give extra critical seconds on the restart. I felt myself pulling back as to extend the glide, but I overcame the urge and pushed instead to continue the glide, keeping it on the edge of flying and stalling, seconds later we flared hard into the water. The right door opened on impact and I opened the left door. I reached down to the floor to retrieve my glasses, I turned the master off, mags off, fuel off, ADSB receiver off and then reached into the rear for the headset cases, and put the headsets away, this would have been at about 10:25am. My passenger was in a rush to get out on my side as it was the shallow side, so at this point we exited the aircraft on the left side and walked to shore in about 3 feet of water. After arriving on bank of river, the aircraft weathervane upstream for a 180 degree turn due to current. Aircraft did not appear to move downstream from the original resting place. We walked up the bank to the nearest house and summoned the owner, at about that time some of the folks from skypark came down the driveway and gave us a ride to my friends house at ID40 Skypark. We made some phone calls for a ride and went back to tie the plane to a tree so it wouldn't go down river. When I experienced the engine out, it was as if the mags were turned off, no pop, backfire, no indication of fuel or ignition. This plane has in my opinion always has had a lack of significant engine speed drop from pulling carb heat on the ground, during runup or idle, but has shown drop in performance when on, in flight.

Operator/Owner Safety Recommendation

Run on fullest tank
check carb heat

Was there Mechanical Malfunction/Failure? ☐ Yes ☒ No
(If yes, list the name of the part, manufacturer, part no., serial no., and describe the failure.)
