Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

VISIBLE DAMAGE ON THE END OF THREE BLADES AND SLIDE OFF THE SKIDS

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

We took off from KSNA to KEMT via KLGB for cross country training and when we came back to KSNA, we did a 700ft Autorotation. We used 60kts to enter Auto and kept 50kts during the glide and we were in the level attitude also Rotor RPM was in the green range all the time. While reaching 150ft I tried to open the throttle slightly to prepare for power recover (because compare to R22, the Cabri G2 have to slightly open the throttle in advance due to more inertia) in the beginning I tried to not to roll too much throttle to prevent directly bring RPM back to green range before flare and after one or two seconds I realized that we do not have enough on throttle and I rolled a little more before enter flare. At the moment it reached the altitude to start flare (40ft) .The student Ethan was rising collective tried to catch the Rotor RPM and didn't flare enough, it looks flat so I decided to roll throttle completely on for power recovery, but engine sounds didn't catch up as expected and RPM didn't came up like it used to be. Then nose suddenly yaw and aircraft roll to the left around 3-4ft AGL. Next thing we knew is the blades hit the ground. It worth noting that the throttle seems to be a little bit stiffer than it used to be for today's flight from KLGB.

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

Roll the throttle off do full down Autorotation
