Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

Airframe damage - tail compressed, engine with cowling detached, windshield cracked, instrument panel shifted, pilot door and cargo hatch jammed shut

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

After calling on unicom that we were departing KTKX rwy 18 for a north bound departure, we departed at approx 3 pm CDT VFR rwy 18. There were no other aircraft in the pattern or the area. Once over obstructions the pilot raised the flaps. The pilot stabilized the airspeed at 120, engaged autopilot and enabled NAV direct VPS and IAS 120 with the A/P altitude to be achieved set at 3000. Pilot noted that ANR was not activated on pilot headset. While trying to free the headset control module from a jammed location between forward portion of front seat and center pedestal/console, pilot accidentally and without realizing it at the time hit the three position fuel pump switch on the pedestal next to the throttle (with his right elbow?) and changed it to the high boost/prime position (the rear position).

This caused the engine to flood, and fail. Pilot failed to ascertain the cause. The oral annunciator almost immediately announced "sink rate, sink rate, sink rate." While continuing to ascertain the cause of the engine failure, the pilot immediately asked the passenger (his spouse, very familiar with the instrumentation) what the altitude was. The passenger immediately responded, "640". The pilot correctly understood that to mean MSL, did the math quickly to determine AGL of approx 380' and elected to immediately deploy the CAPS despite being a little below the deployment envelope.

Approximately 2 to 3 miles east of the airport, the aircraft impacted the ground backwards at substantial speed (50kts estimate) at an approximately 45 degree angle nose up, causing the damage reported in this form above. The pilot door was jammed and could not be opened. After several seconds, the pilot grabbed the hammer in the console compartment to break the pilot side window but the passenger was able to get the passenger door open. The pilot then shut down the electronics including batteries, and both personnel departed through the passenger door and waited for first responders after calling 911. The parachute was still inflated in a mild breeze almost directly behind the aircraft before deflating approximately 2 to 5 minutes after egressing. Two local farmers arrived first, having observed the CAPS deployment. Both pilot and passenger suffered minor soft tissue injuries consistent with whiplash and passenger suffered a sternum contusion, apparently from the seatbelts after initial opening shock.

Terrain was flat, with dense fully mature soybean fields. Wreckage displayed about 25 ft of crop destruction forward of the aircraft the width of the fuselage, indicating that the aircraft had hit the field going backwards. The nose wheel detached about 15 ft forward of the final position of the aircraft. A propellor blade detached about 5 ft forward of the engine. The engine and cowling detached from the aircraft and was canted to the right (facing forward) at about an 80 degree angle but still very close to the aircraft.

EMT was called and the pilot and passenger were taken to Pemsco Memorial Hospital in Hayti TX and released at approximately 8 pm.

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

Place a guard over the three position fuel pump switch. Maintain a sterile cockpit until 2000 '. Wait until engaging autopilot until at a safer altitude. Understand and memorize the major causes of engine failure which are fuel related and related emergency procedures (i.e., switches and control locations to check).

ADDITIONAL INFORMATION (Please type or print in ink)

Use this space if additional space is needed for any answers.

Note:

The propeller is a "constant speed" propeller.

The time since overhaul for the engine is in fact time since the engine was rebuilt by Continental and installed in the aircraft in early Feb 2018, replacing the original engine.

The local altimeter is set in the aircraft. Notes were lost in the accident and I don't remember.

The ceiling is recorded on notes that I no longer have. So it is unknown at this point, because I don't remember.

I HEREBY CERTIFY THAT THE ABOVE INFORMATION IS COMPLETE AND ACCURATE TO THE BEST OF MY KNOWLEDGE
