Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

Straight in to 29 at KSBP cleared to land. Dropped gear down felt it come down speed dropped saw the left gear out the window and on landing was all great below 65 to 70 knots and felt a bump up from the right and hit the front wheel which was odd then felt like it was dropping to the right so thought something was wrong with the right main so thought need to exit the runway asap so went right to the dirt and weeds felt the right side of the plane drop but cleared off the runway and felt the plane spin to the right and was always holding back on the yoke to avoid a prop strike and wanted to make sure it did not flip. Made a compete 180 aligned with Alpha taxiway next to it and killed the engine contacted tower and stated I was in the weeds. I shut everything down closed the gas valves and exited the airplane. I called my FBO that works on my plane and all the crash trucks and fire engines showed up. I stated i was fine do not need the ambulance etc. They were careful to use bags to lift the plane, i was outside of the safety zone so it did not shut down the airport (which was good) plane was lifted and gear swung but would not lock in. Plane was rased and towed back to Air San Luis for further investigation and repairs.

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

Pumped not failed, will install a mirror on the wing to see that the right wheel is locked in place. Left wheel and front wheel locked saw the left and hear all of it.....
