Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

Substantial damage to left wing, landing gear, and propeller.

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

The flight originated at KRNO on 09/17/18 in N7472P, a Piper Comanche 250. Intended destination was KCCB. Prior to the flight, the aircraft had been tied down at Atlantic Aviation for four days. At 0950L I called flight service for a complete weather briefing. I conducted a thorough preflight inspection and did not observe any discrepancies. While parked at the FBO the aircraft had 20 gallons of fuel added (10 gallons added to each aux. tank) bringing total fuel load to 75 usable gallons.

Departure time was approximately 1115L. Reno Tower handed me off to departure control and I obtained VFR flight following. Cruise altitude was 12,500' MSL, and the left main fuel tank was used throughout the climb, which had 30 gallons in it at departure. Once at cruise altitude, I switched fuel tanks to the right aux. tank and alternated between the left and right aux. tanks every 30 minutes until there was approximately five gallons remaining in each aux. tank. The electric fuel pump was used during all tank changes. After a heading change at Hangtown VOR, I descended to 11,500' MSL.

About 75 miles from KCCB, a gradual descent was started. Mixture and propeller controls were increased throughout the descent, until full RPM and full rich mixture were set at approximately 4,000' MSL and 8nm away from KCCB. ATC then released me from flight following and I tuned the radio to the KCCB AWOS frequency. Weather reported was VFR with winds of 8 knots at 230 degrees.

About 3.5nm from KCCB, I turned on the electric fuel pump and switched fuel tanks to the right main tank. Fuel pressure was steady and the electric pump was left on for the remainder of the approach. I tuned the radio to the KCCB CTAF frequency and reported my location and intentions to enter left traffic for runway 24 on the crosswind leg. A Glasair on downwind was the only other aircraft in the pattern.

From crosswind to downwind, I extended the landing gear and confirmed it down with a green light. The electric fuel pump was confirmed on, and mixture and prop controls were confirmed full rich and full RPM. Abeam the approach end of runway 24 I added the first notch of flaps. I extended my downwind leg to ensure adequate separation from the Glasair, and announced my position as number two for landing on CTAF. The landing checklist items were confirmed again at this time.

I turned onto base leg once the Glasair cleared the runway, added the second notch of flaps and confirmed the landing checklist items. From base leg to final, I added the third notch of flaps. On final I noted an increasing sink rate and increased throttle to compensate, however the engine did not respond and there was no apparent change in power. I switched fuel tanks to the left main tank, and confirmed that the electric fuel pump was switched on. I also confirmed that the ignition switch was on both, mixture control was full rich and propeller control was full RPM, but engine power was not restored.

Since engine power was not restored, I made the decision to land in an empty field short of runway 24. I chose this because I did not want to risk landing short of the runway on the road or the rocky embankment on the east end of runway 24.

Before touchdown we tightened our seat belts and I secured the engine by pulling the mixture control to cutoff, and turning off the ignition switch and fuel selector. I left the electrical master switch on to keep the stall warning system functioning as I intended to make a full stall landing.

Touchdown was made in a wings level, nose high attitude. The aircraft had rolled a short distance when the nose wheel struck a large rock, breaking the nose gear at the strut. Shortly after, the left wing also struck a large rock which spun the aircraft about 150 degrees to the left where it came to a stop.

My passenger opened the cabin door and exited the aircraft while I turned off all electrical switches, and confirmed that the fuel selector and ignition were turned off. I then exited the aircraft.

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

None at this time.

MECHANICAL MALFUNCTION/FAILURE (If more space is needed, continue on separate sheet)Was there Mechanical Malfunction/Failure? ☒ Yes ☐ No

(If yes, list the name of the part, manufacturer, part no., serial no., and describe the failure.)

The engine failed to produce power and/or respond to throttle control changes.
