Unknown

NARRATIVE HISTORY OF FLIGHT (Please type or print in ink)

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

Sep 20, 2018

Elisa Warren the designated PIC of the flight, and I started walking to the airplane around 1:15pm to determine if the battery had enough charge by starting the engine. Elisa tried to start the engine, but the propeller had difficulty rotating one revolution. It was determined the battery needed changing or charging. A mechanic came and switched the battery. As the battery was being changed, Air Service Hawaii filled the plane to each fuel tank's respective tabs.

After the battery was changed and the fuel tanks filled, Elisa tried to start the engine as a means to test if the engine will run. She was able to turn the engine a few times and then it caught for a few prop rotations before it died. She tried a few more times without the engine starting. I then took my turn to start the engine. It took a few tries before the engine started. I left the engine running for a total of 4 minutes, with the tanks switched after 1 minute. When the ammeter stabilized, the engine was shut down.

After verifying the engine runs, with the added fuel, the Pre-flight checklist was completed by the Elisa. Into the Pre-flight Checklist, Elisa started sumping the fuel tanks within less than 5 minutes. Elisa noticed a bead of water in the left fuel tank. She then sumped the fuel one more time and no water remained. The right fuel tank was sumped once and there was no water. The rest of the checklist was completed as written. The engine was started by Elisa, with her seated at the left seat and I was seated on the right, without difficulty. The fuel tank was switched after taxiing the airplane to the designated run up area where the Run Up checklist was completed. The engine did not run rough and the engine gauges were reading normal. Then, Elisa gave an emergency briefing describing what she will do in case of engine failure and or engine fire.

The Before Take Off check was complete before taking off of runway 4R at about 2:30pm from Honolulu Airport. We headed to the North Shore where clearing turns and Chandelles and Lazy Eights were accomplished by Elisa prior to another fuel tank switch. I reminded Elisa of each fuel tank change. Steep spirals were completed. We then transitioned to the South Practice area where 8s On Pylons were practiced and another fuel tank switch, which I reminded her.

Elisa then practiced touch and go at PHJR 22L and another fuel tank switch was made, after reminding her, after two touch and go. After that, she practiced four Power Off 180s targeting the 1000 ft side stripes, but kept landing past it. The fourth Power Off 180 resulted in her touching down 100ft before the thousand foot marker. The airplane kept rolling before setting the flaps to take off and powering the airplane for takeoff. She verbalized, "positive rate, flaps up; no useable runway remaining, gear up" after each take off. Before each base leg of each touch and go, the Before Landing check list was used including an evaluation if a change in fuel tanks is necessary, verifying the landing gear was down, fuel pump turned on, mixture full rich, seat belt on. The fuel pump is always left on after the Cross Wind leg, at which time the Climb checklist was done.

After the 6th touch and go and after lift off with the gear up and flaps up, the engine started having trouble climbing and the engine produced a sound as if it was in idle. The engine was not responding to throttle movements. During this time, the throttle and mixture were at full forward, and the boost pump was on. By this time the airplane was at 300ft, 88kts, and fast approaching the end of 22L. Elisa froze I took the controls. The throttle was exercised and fuel tank was then switched as a means to quickly trouble shoot as time was of the essence. This resulted without any change in performance. Seeing unknown grassy terrain beyond the concrete, I elected to land gear up with the mixture at cut off to prevent the plane from rolling into unknown grassy terrain. The battery and all the switches were turned off. The airplane skidded to about 50ft prior to where the concrete ends and the grass begins at the departure end of runway 22L.

About ten minutes after Elisa and I exited the plane without injuries, the fire trucks arrived plane side.

PIC ELISA WARREN not cooperating, refuses to provide any information.

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

1. It makes the investigation much more difficult when pilots don't cooperate. Michelangelo has been cooperative, I wish I could say the same for Elisa.
2. When there is a broken link in the chain, don't go, this comes down to ADM, aeronautical decision making and it starts from the time you leave your house to the flight school.
3. Put the gear down!

MECHANICAL MALFUNCTION/FAILURE (If more space is needed, continue on separate sheet)

Was there Mechanical Malfunction/Failure? ☐ Yes ☐ No
(If yes, list the name of the part, manufacturer, part no., serial no., and describe the failure.)
