Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

BOTH WING TIPS DAMAGED. FRONT NOSE WHEEL STRUT COLLAPSED. LEFT AND RIGHT DOORS GLASS BRKEN

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and and location, services obtained, and intended destination. Provide as much detail as possible.

the passenger, whom I do not recall the name, wanted a demo flight with the possibility of purchasing. we departed KAPC and proceeded westerly to be out of class c. the passenger wanted to see the plane in slow flight. we were going about 30 knots and around 1000 feet. Not soon after reaching that attitude, smoke started pouring into the cockpit. I immediately turned back to Napa and let them know I had trouble and was intending to land runway. right after the call, the oil pressure went to zero and the oil temp went to 275 and then the display turned off. the engine stopped with the runway well in sight but i knew i was not going to make it. i told the tower and we started to descend rapidly. at this time i was over water and all that ways in front of me was a levy road and power lines on the right. I landed on the road but it was very narrow. I had a tail wind and a cross wind and it pushed me enough to my left that the left wheel caught the bank of the back levy and spun the plane to the right. the plane slid to the right and the down the bank nose first. the called the tower and told them that we were all right and they sent help. no fuel was expended and no one was hurt. got out of the airplane and waited for assistance.

I built this airplane as an experimental aircraft from a kit. I have always had an issue with the engine. I have watched it very closely and did more than the usual inspections. the engine always burned too much oil. i complained the factory rep and they did not offer too much. I finally did a compression check early last year and the 2 & 4 cylinders were at 25psi. this was quite alarming because the engine ran fine and no noticeable power issues. Later, I did a bore scope inspection and could see where the edges of the valves were burnt and scalloped. the factory rep suggested i send the four cylinders, heads, and pistons back the repair facility in georgia. they took about a month or two and replaced the heads, pistons, and one of the cylinders. I also replaced the oil cooler because the oil temp was always higher than I liked. the larger oil cooler worked fined and did the job. after the replacement of the pistons and heads, the plane flew fine. It still was burning oil more than i liked. ray Lawrence, the repair mechanic at the factory in georgia suggested that I use automotive fuel. I did do that for a few hours of flight. No measurable change and then the engine quit.

I recognize the I did not make entries into the engine log book for inspections or repairs. I was the builder and sole pilot for this plane. I certify that under the penalty of perjury, these statements are true and accurate. I did all of the service bulletins and used the maintenance schedules in the maintenance manual. I did the work and I just checked them off. I did not write them in a separate log book.

I HEREBY CERTIFY THAT THE ABOVE INFORMATION IS COMPLETE AND ACCURATE TO THE BEST OF MY KNOWLEDGE
