

NATIONAL TRANSPORTATION SAFETY BOARD PILOT/OPERATOR AIRCRAFT ACCIDENT/INCIDENT REPORT

This form to be used for reporting civil and public aircraft accidents and incidents

BASIC INFORMATION

Accident/Incident Location

Nearest City/Place: Hilo State: HI

ZIP: 96720 Country: United States

Latitude: N 19deg 38' 36.56" Longitude: W154deg 59' 06.11"

(Enter in decimal degrees or degrees:minutes:seconds)

Accident/Incident Date/Time

Date: 08/19/2018 Local Time: 1:20 pm
mm/dd/yyyy

Time Zone: Hawaiian Local

Collision with Other Aircraft: ☐ Midair ☐ On-ground ☒ None

AIRCRAFT INFORMATION

Registration Number: N11QP

Manufacturer: Airbus

Model: EC130B4

Serial Number: 4715

Year of Manufacture: 2009

Amateur-Built: ☐ Yes ☒ No If Yes: ☐ Kit/Plans ☐ Original Design Make: _____

- ☐ IFR-Equipped and Certified
☐ Commercial Space Flight
☐ Unmanned Aircraft

Maximum Gross Weight: 5350 lbs

Weight at Time of Accident/Incident: 3960 lbs

Number of Seats: 7 Flight Crew Seats: 1

Cabin Crew Seats: 0 Passenger Seats: 6

Number of Engines: 1

Category of Aircraft

- ☐ Airplane
☐ Balloon
☐ Blimp/Dirigible
☐ Glider
☐ Gyroplane

- ☒ None ☐ Both Ground and In-Flight
☐ In-Flight ☐ Fire at Unknown Time
☐ On-Ground ☐ Unknown

Aircraft Explosion

- ☒ None ☐ Both Ground and In-Flight
☐ In-Flight ☐ Explosion at Unknown Time
☐ On-Ground ☐ Unknown

Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

Left hand rear sliding door exited the aircraft for unknown reasons, impacted two of the main rotor blades causing damage to both. The third rotor blade has no visible impact damage. The door is believed to be lost into the ocean offshore from the landing site. There is no additional/visible damage to the aircraft.

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

Normally based at Waikoloa, I was tasked this day to be the pilot for the track and balancing of an EC130B4 based in Hilo. My scheduled start time was 09:00. I performed a complete preflight inspection of the aircraft shortly after my arrival at the base.

The first track and balance flight was conducted beginning at about 12:00 PM local time and lasted approximately 15 minutes. Ground and hover balance readings were first taken and they were good enough to permit readings in forward flight. Balance reading were taken at 80 knots. We then accelerated to 120 knots, but at that speed the mechanic informed me that he was no longer obtaining readings on his equipment and he instructed me to return to Hilo to troubleshoot.

After the mechanic adjusted the attachment location of balancing equipment near the main rotor hub, I conducted a walk-around of the aircraft checking to make sure all doors and cowlings were closed and latched, and that the track and balance equipment, sensors and wires looked secure. Visually, all doors and cowlings appeared closed and latched and the aircraft appeared safe for flight. I do not recall opening the right, rear sliding door between flights, and I am sure that it was in the closed position before I started the aircraft.

I started the aircraft at about 12:50 local time (estimated.) Ground and hover balance reading were taken and, from the pilot's perspective, seemed smooth. The mechanic instructed me to takeoff for forward flight reading. I departed east then south, climbed slowly to 2000 feet, intercepted the shoreline, and followed it in the direction of Kaloli Point.

At 2000 feet and 80 knots, balance reading were taken and from the pilot's perspective seemed to be a small low frequency vibration. The mechanic informed me that the rotor system was out of tolerance a bit in the vertical. I then accelerated to 120 knots per the mechanic's instructions. From the pilot's perspective, the vibration of the aircraft increased somewhat. The mechanic instructed me to return to base.

A mile or so short of Kaloli Point, I turned the aircraft to follow the shoreline back to Hilo, lowered the collective slightly to decelerate, made a radio call to Hilo approach, and began a slow descent. The aircraft appeared to be flying normally, other than a modest low frequency vibration.

I estimate I was one-half mile past Shipmans' Estate and one-quarter mile off-shore when I heard the left-rear sliding door begin to suddenly slide. As soon as I heard the movement, I turned my head behind and to the left and saw the door off the aircraft in mid-air. I turned my head forward and heard a very loud noise and simultaneous jolt, which was the door impacting the aircraft. The aircraft began to vibrate in a serious fashion, but remained controllable. At this time I was not sure what part of the aircraft was impacted by the door, but my first thought was that it might have been the empennage.

I immediately began a descent of what I believe was about 1500 feet per minute and slowed the aircraft to what I believe was about 80 knots and turned left toward the shoreline. My concern was to get the helicopter on the ground as soon as possible as, due to the severity of the impact, I was concerned about the structural integrity of the aircraft. As there was no suitable landing spot within two miles towards Hilo, I turned the aircraft back towards Shipmans' Estate to effect a landing.

On long final approach, I tested the anti-torque pedals to ensure I still had tail rotor authority. Fortunately, I was able to conduct a normal approach and landing to a large and level groomed grass area.

Upon landing, I shutdown the aircraft in the normal fashion and the mechanic and I exited the aircraft. Upon post-flight inspection of the aircraft, I observed that the door did not appear to impact the fuselage of the aircraft at all. The door appears to have struck instead two of the main rotor blades, one about mid-point on the blade, one on the outboard section of the blade. The door itself, I believe, fell into the ocean.

Upon exiting the aircraft, we were immediately approached by a woman wearing a security guard uniform and shortly thereafter by a

Continued:

Upon exiting the aircraft, we were immediately approached by a woman wearing a security guard uniform and shortly thereafter by a couple who I believe were the owners of the Shipmans' Estate. The security guard informed me that she was an off duty police woman employed by the Hilo Police department. She was friendly, but appeared to be in direct communication with the Hilo Police Department.

The security guard / police officer asked basic identification information for me and the mechanic including name, address, and telephone number which I provided to her and which I believe she relayed by telephone to the Hilo Police Department. The Hilo Fire Department Helicopter then landed at our location to see if we were doing okay. The mechanic flew back to Hilo Airport when they departed. Fire trucks and ambulances also showed up, courtesy the security guard.

Josh, C. from the NTSB called me on my cell phone. I believe they got my number from the Hilo Police Department. My recollection was that there was a person named Ashley from the FAA on the phone call as well. Josh asked me basic questions about the event. I answered the questions honestly but briefly and indicated to him just the basics: the time and location of my departure, how many passengers, that there were no injuries, and that I conducted a precautionary landing because the door came off the aircraft and impacted the main rotor blades. He then asked me to take pictures of the damage to the blades and send them to him by text message. I told him that I was unable to do that right away, and deferred that task to upper management.

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

Inspect fleet for any systemic sliding door faults.

MECHANICAL MALFUNCTION/FAILURE (If more space is needed, continue on separate sheet)Was there Mechanical Malfunction/Failure? ☐ Yes ☒ No
