Debra,

I wanted to type out the description of what happened at approx. 3:30 PM on Wednesday the 16th of January 2019 in my Citabria 7GCBC..

I had departed KHLN at approximately 1:50 PM, headed East enjoying the calm day.

I had been airborne over the townsend /white Sulphur/ toston area for 1.4 hours approx. and decided to head back to Helena due to me having an appointment in Helena at 5:30.

I turned heading back northwest and was flying slow, the engine began to run rough and felt like carburetor ice, i applied carb heat. Carb Heat had been on for approx 3 minutes and the engine still did not seem to be running smoothly, I tried to slowly climb thinking that I could gain elevation and offer me some assurance on finding a place to land. The airplane didn't climb and so I started looking for a place to put it down. I saw a gravel bar on the Missouri river and felt that was my only option. I pulled 4 clicks of flaps on and trimmed for 60kn.. I landed on the sandbar and realized it to very bumpy and rough. I applied brakes and as I rolled out there was an area of very soft fine sand that I fell into, in slow motion at approx. 15-20 mph my tires dug into the sand and tipped me up immediately and onto my back. Very disturbed I grabbed my phone, unbuckled, unlocked door and bailed out while flipping the master and mags off. My plane was nose down in the sand and on its back..
